

Outdoor LoRaWAN[®] Gateway UG67

User Guide

Preface

Thanks for choosing Milesight UG67 LoRaWAN® gateway. UG67 delivers tenacious connection over network with full-featured design such as automated failover/failback, extended operating temperature, dual SIM cards, hardware watchdog, VPN, Gigabit Ethernet and beyond.

This guide shows you how to configure and operate the UG67 LoRaWAN® gateway. You can refer to it for detailed functionality and gateway configuration.

Readers

This guide is mainly intended for the following users:

- Network Planners
- On-site technical support and maintenance personnel
- Network administrators responsible for network configuration and maintenance

Chapter 1 Product Introduction

1.1 Overview

UG67 is a robust 8-channel outdoor LoRaWAN® gateway. Adopting SX1302 LoRa chip and high-performance quad-core CPU, UG67 supports connection with more than 2000 nodes. UG67 has line of sight up to 15 km and can cover about 2km in urbanized environment, which is ideally suited to smart office, smart building and many other outdoor applications.

UG67 supports not only multiple back-haul backups with Ethernet, Wi-Fi and cellular, but also has integrated mainstream network servers (such as The Things Industries, ChirpStack, etc.) and built-in network server and Milesight IoT Cloud for easy deployment.

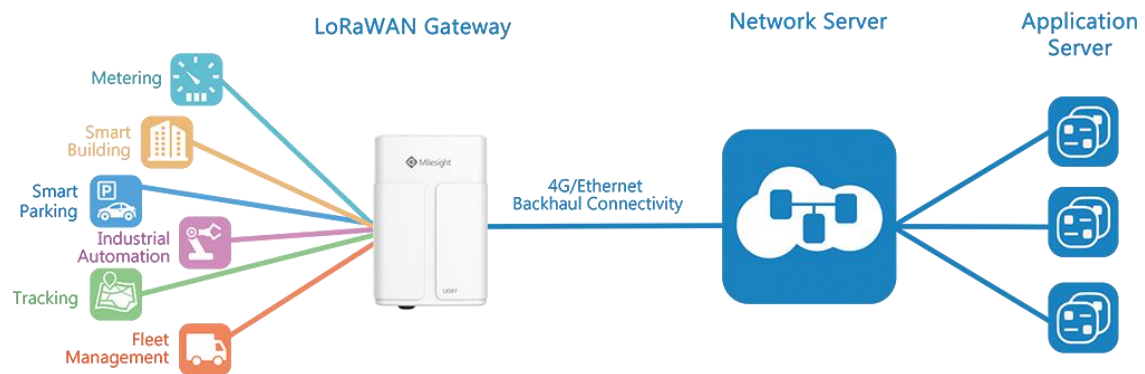

Figure 1-1

1.2 Advantages

Benefits

- Built-in industrial CPU and big memory
- Ethernet, 2.4GHz Wi-Fi and global 2G/3G/LTE options make it easy to get connected
- Embedded network server and compliant with several third party network servers
- MQTT, HTTP or HTTPS protocol for data transmission to application server
- Rugged enclosure, optimized for wall or pole mounting
- 3-year warranty included

Security & Reliability

- Automated failover/failback between Ethernet and Cellular
- Enable unit with security frameworks like IPsec/OpenVPN/GRE/L2TP/PPTP/ DMVPN
- Embedded hardware watchdog to automatically recover from various failure and ensure highest level of availability

Easy Maintenance

- Milesight DeviceHub provides easy setup, mass configuration, and centralized management of remote devices
- The user-friendly web interface design and various upgrading options help administrator to manage the device as easy as pie
- WEB GUI and CLI enable the admin to achieve quick configuration and simple management among a large quantity of devices
- Users can efficiently manage the remote devices on the existing platform through the industrial standard SNMP

Capabilities

- Link remote devices in an environment where communication technologies are constantly changing
- Industrial quad core 64-bit ARM Cortex-A53 processor, high-performance operating up to 1.5GHz with low power consumption, and 8GB eMMC available to support more applications
- Support wide operating temperature ranging from -40°C to 70°C/-40°F to 158°F

1.3 Specifications

| Hardware System | |
|-----------------|--|
| CPU | Quad-core 1.5GHz, 64-bit ARM Cortex-A53 |
| Memory | 8 GB eMMC Flash, 512 MB DDR4 RAM |
| LoRaWAN | |
| Antenna | 2 × Internal Antennas + 2 × 50 Ω N-Female External Connectors |
| Channel | 8 |
| Frequency Band | CN470/IN865/EU868/RU864/US915/AU915/KR920/AS923/AS923-2 |
| Sensitivity | -140dBm Sensitivity @292bps |
| Output Power | 27dBm Max |
| Protocol | V1.0 Class A/Class B/Class C and V1.0.2 Class A/Class B/Class C |
| Ethernet | |
| Ports | 1 × RJ-45 (PoE PD supported) |
| Physical Layer | 10/100/1000 Base-T (IEEE 802.3) |
| Data Rate | 10/100/1000 Mbps (auto-sensing) |

| | |
|---------------------------------------|--|
| Interface | Auto MDI/MDIX |
| Mode | Full or half duplex (auto-sensing) |
| Wi-Fi Interfaces | |
| Antenna | Fully Integrated and Internal Antenna |
| Standards | IEEE 802.11 b/g/n |
| | 802.11b: 18 dBm +/-2.0 dBm (11 Mbps) |
| | 802.11g: 15 dBm +/-2.0 dBm (6 Mbps) |
| | 802.11g: 15 dBm +/-2.0 dBm (54 Mbps) |
| Tx Power | 802.11n@2.4 GHz: 14 dBm +/-2.0 dBm (MCS0_HT20) |
| | 802.11n@2.4 GHz: 14 dBm +/-2.0 dBm (MCS7_HT20) |
| | 802.11n@2.4 GHz: 13 dBm +/-2.0 dBm (MCS0_HT40) |
| | 802.11n@2.4 GHz: 13 dBm +/-2.0 dBm (MCS7_HT40) |
| Cellular Interfaces (Optional) | |
| Antenna | Internal Antenna |
| SIM Slots | 1 |
| GPS | |
| Antenna | Internal Antenna |
| Sensitivity | -167dBm@Tracking, -149dBm@Acquisition, -161dBm@Re-acquisition |
| Position Accuracy | <2.5m CEP |
| Software | |
| Network Protocols | PPPoE, SNMP v1/v2c/v3, TCP, UDP, DHCP, DDNS, HTTP, HTTPS, DNS, SNTP, Telnet, SSH, MQTT, etc. |
| VPN Tunnel | DMVPN/IPsec/OpenVPN/PPTP/L2TP/GRE |
| Firewall | ACL/DMZ/Port Mapping/MAC Binding |
| Management | Web, CLI, SMS, On-demand dial up |
| App | Python SDK, Node-RED |
| Power Supply and Consumption | |
| Power Supply | 1. 1 × 802.3 af PoE Input 2. 12 VDC with M12 Connector |
| Consumption | Typical 3.6W, Max 4.8W |
| Physical Characteristics | |
| Ingress Protection | IP67 |
| Dimensions | 250 x 172 x 92 mm |

| | |
|-----------------------|---|
| Mounting | Wall or Pole Mounting |
| Others | |
| Reset Button | 1 × RST |
| LED Indicators | 1 × SYS, 1 × LoRa, 1 × LTE |
| Built-in | Watchdog, RTC, Timer |
| Environmental | |
| Operating Temperature | -40°C to +70°C (-40°F to +158°F) |
| Storage Temperature | Reduced cellular performance above 60°C |
| Ethernet Isolation | 1.5 kV RMS |
| Relative Humidity | 0% to 95% (non-condensing) at 25°C/77°F |

1.4 Dimensions (mm)

Chapter 2 Access to Web GUI

This chapter explains how to access to Web GUI of the UG67.

Username: **admin**

Password: **password**

2.1 Wireless Access

1. Enable Wireless Network Connection on your computer and search for access point **"Gateway_*****"** to connect it.
2. Open a Web browser on your PC (Chrome is recommended) and type in the IP address **192.168.1.1** to access the web GUI.
3. Enter the username and password, click "Login".

English

Username

Password

Login

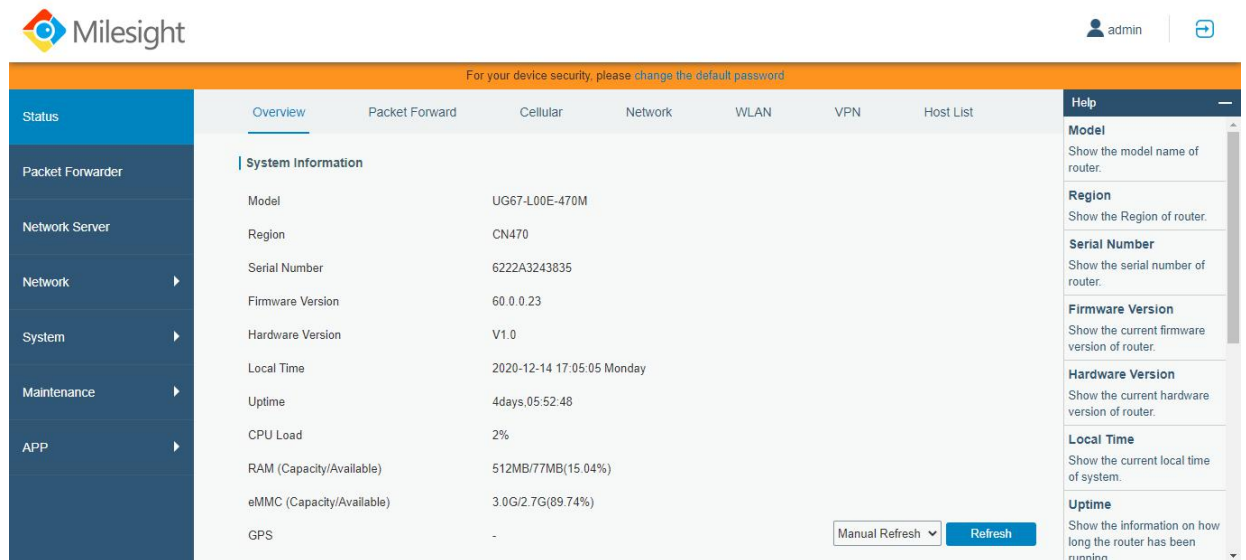

If you enter the username or password incorrectly more than 5 times, the login page will be locked for 10 minutes.

4. After logging the web GUI, follow the guide to complete the basic configurations. You can also skip the instructions. It's suggested that you change the password for the sake of security.

5. You can view system information and perform configuration of the gateway.

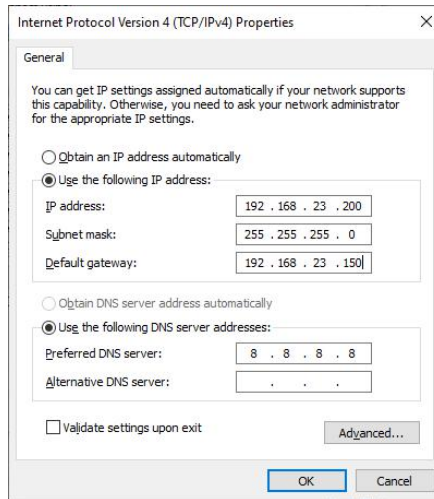

2.2 Wired Access

Connect PC to UG67 ETH port through PoE injector to access the web GUI of gateway. The following steps are based on Windows 10 system for your reference.

1. Go to “Control Panel” → “Network and Internet” → “Network and Sharing Center”, then click “Ethernet” (May have different names).

2. Go to “Properties” → “Internet Protocol Version 4(TCP/IPv4) ”and select “Use the following IP address”, then assign a static IP manually within the same subnet of the gateway.

3. Open a Web browser on your PC (Chrome is recommended) and type in the IP address **192.168.23.150** to access the web GUI.
4. Enter the username and password, click "Login".

English

! If you enter the username or password incorrectly more than 5 times, the login page will be locked for 10 minutes.

5. After logging the web GUI, follow the guide to complete the basic configurations. You can also skip the instructions. It's suggested that you change the password for the sake of security.

6. After guide complete, you can view system information and perform configuration of the gateway.

The screenshot shows the Milesight IoT web interface. At the top, there is a navigation bar with the Milesight logo, a user profile for 'admin', and a refresh icon. Below the navigation bar is a warning banner: "For your device security, please change the default password". The main content area is divided into a left sidebar and a main panel. The sidebar contains menu items: Status, Packet Forwarder, Network Server, Network, System, Maintenance, and APP. The main panel has tabs for Overview, Packet Forward, Cellular, Network, WLAN, VPN, and Host List. The 'Overview' tab is active, displaying 'System Information' with the following data:

| Parameter | Value |
|---------------------------|----------------------------|
| Model | UG67-L00E-470M |
| Region | CN470 |
| Serial Number | 6222A3243835 |
| Firmware Version | 60.0.0.23 |
| Hardware Version | V1.0 |
| Local Time | 2020-12-14 17:05:05 Monday |
| Uptime | 4days,05:52:48 |
| CPU Load | 2% |
| RAM (Capacity/Available) | 512MB/77MB(15.04%) |
| eMMC (Capacity/Available) | 3.0G/2.7G(89.74%) |
| GPS | - |

At the bottom right of the main panel, there are two buttons: "Manual Refresh" (with a dropdown arrow) and "Refresh". On the far right, there is a 'Help' sidebar with expandable sections for Model, Region, Serial Number, Firmware Version, Hardware Version, Local Time, and Uptime, each with a brief description of the information it displays.

Chapter 3 Web Configuration

3.1 Status

3.1.1 Overview

You can view the system information of the gateway on this page.

| Overview | Packet Forward | Cellular | Network |
|---------------------------|----------------|-------------------------------|---------|
| System Information | | | |
| Model | | UG67-L00E-915M | |
| Region | | US915 | |
| Serial Number | | 6222A4983306 | |
| Firmware Version | | 60.0.0.33 | |
| Hardware Version | | V1.1 | |
| Local Time | | 2021-01-06 10:37:17 Wednesday | |
| Uptime | | 01:12:19 | |
| CPU Load | | 7% | |
| RAM (Capacity/Available) | | 512MB/146MB(28.52%) | |
| eMMC (Capacity/Available) | | 3.0G/2.8G(90.66%) | |
| GPS | | - | |

Figure 3-1-1-1

| System Information | |
|---------------------------|--|
| Item | Description |
| Model | Show the model name of gateway. |
| Region | Show the LoRaWAN® frequency region of gateway. |
| Serial Number | Show the serial number of gateway. |
| Firmware Version | Show the currently firmware version of gateway. |
| Hardware Version | Show the currently hardware version of gateway. |
| Local Time | Show the currently local time of system. |
| Uptime | Show the information on how long the gateway has been running. |
| CPU Load | Show the current CPU utilization of the gateway. |
| RAM (Capacity/Available) | Show the RAM capacity and the available RAM memory. |
| eMMC (Capacity/Available) | Show the eMMC capacity and the available eMMC memory. |

| | |
|-----|-------------------------------|
| GPS | Show GPS data of the gateway. |
|-----|-------------------------------|

Table 3-1-1-1 System Information

3.1.2 Packet Forwarder

You can view the packet forward status of gateway on this page.

| Overview | Packet Forward | Cellular | Network | WLAN |
|------------------------------|--------------------------|----------|---------|------|
| Basic | | | | |
| Version | 4.0.1 | | | |
| Status | Connected | | | |
| Gateway ID | 24E124FFFEF0E225 | | | |
| Region Code | CN470 | | | |
| Uplink | | | | |
| Packet Received | 0 | | | |
| Packets Received State | CRC_OK: 0.00%, CRC_FAIL: | | | |
| Packet Forwarded | 0 (0 bytes) | | | |
| Push Data Datagrams Sent | 1 (133 bytes) | | | |
| Push Data Acknowledged | 100.00% | | | |
| Downlink | | | | |
| Pull Data Sent | 3 (100.00% acknowledged) | | | |
| Pull Resp Datagrams Received | 0 (0 bytes) | | | |
| Packets Sent to node | 0 (0 bytes) | | | |

Figure 3-1-2-1

| Packet Forwarder Status | |
|-------------------------|--|
| Item | Description |
| Basic | |
| Version | Show the version of packet forwarder software. |
| Status | Show the status of packet forwarder. |
| Gateway ID | Show the ID of the gateway. |
| Region Code | Show the LoRa region code which is based on the gateway's variant. |
| Uplink | |
| Packet Received | Show the count of data packet from node to gateway. |
| Packets received State | Show the RF packets receiving state: CRC_OK: Percentage of CRC verification |

| | |
|------------------------------|--|
| | CRC_Fail: Percentage of CRC verification failure NO_CRC: Percentage of abnormal packets without CRC |
| Packets Forwarded | Packets that CRC verified are sent from gateway to server. |
| Push Data Datagrams Sent | The total quantity of packets sent from gateway to server, including the RF packets forwarded and statistics packets. |
| Push Data Acknowledged | Percentage of acknowledged packets among Push Data Datagrams Sent. |
| Downlink | |
| Pull Data Sent | Show the number of keepalive packets sent to the server, and percentage of acknowledged packet regarding the keepalive packet from the server. |
| Pull Resp Datagrams Received | Show the packet counts and size that will be sent from server to gateway. |
| Packets Sent to node | Show the RF packet counts and size that will be sent from gateway to node. |
| Packets Sent Errors | Show the RF packet counts that fail to be sent from server to node. |

Table 3-1-2-1 LoRaWAN Status

3.1.3 Cellular

You can view the cellular network status of gateway on this page.

| Overview | Packet Forward | Cellular | Network | WLAN |
|-----------------|---------------------------|----------|---------|------|
| Modem | | | | |
| Status | Ready | | | |
| Model | EC25 | | | |
| Version | EC25ECGAR06A07M1G | | | |
| Signal Level | 26asu (-61dBm) | | | |
| Register Status | Registered (Home network) | | | |
| IMEI | 860425047368939 | | | |
| IMSI | 460019425301842 | | | |
| ICCID | 89860117838009934120 | | | |
| ISP | CHN-UNICOM | | | |
| Network Type | LTE | | | |
| PLMN ID | | | | |
| LAC | 5922 | | | |
| Cell ID | 340db80 | | | |

Figure 3-1-3-1

| Modem Information | |
|-------------------|--|
| Item | Description |
| Status | Show corresponding detection status of module and SIM card. |
| Model | Show the model name of cellular module. |
| Version | Show the version of cellular module. |
| Signal Level | Show the cellular signal level. |
| Register Status | Show the registration status of SIM card. |
| IMEI | Show the IMEI of the module. |
| IMSI | Show IMSI of the SIM card. |
| ICCID | Show ICCID of the SIM card. |
| ISP | Show the network provider which the SIM card registers on. |
| Network Type | Show the connected network type, such as LTE, 3G, etc. |
| PLMN ID | Show the current PLMN ID, including MCC, MNC, LAC and Cell ID. |
| LAC | Show the location area code of the SIM card. |
| Cell ID | Show the Cell ID of the SIM card location. |

Table 3-1-3-1 Modem Information

| Network | |
|---------------------|------------------|
| Status | Connected |
| IP Address | 10.53.241.18 |
| Netmask | 255.255.255.252 |
| Gateway | 10.53.241.17 |
| DNS | 218.104.128.106 |
| Connection Duration | 0 days, 00:04:26 |

Figure 3-1-3-2

| Network Status | |
|---------------------|---|
| Item | Description |
| Status | Show the connection status of cellular network. |
| IP Address | Show the IP address of cellular network. |
| Netmask | Show the netmask of cellular network. |
| Gateway | Show the gateway of cellular network. |
| DNS | Show the DNS of cellular network. |
| Connection Duration | Show information on how long the cellular network has been connected. |

Table 3-1-3-2 Network Status

3.1.4 Network

On this page you can check the Ethernet port status of the gateway.

| Overview | Packet Forward | Cellular | Network | WLAN | VPN | Host List | |
|----------|----------------|----------|----------------|---------------|--------------|-----------|----------|
| WAN | | | | | | | |
| Port | Status | Type | IP Address | Netmask | Gateway | DNS | Duration |
| eth 0 | up | Static | 192.168.23.202 | 255.255.255.0 | 192.168.23.1 | 8.8.8.8 | 07m 25s |

Figure 3-1-4-1

| Network | |
|------------|---|
| Item | Description |
| Port | Show the name of the Ethernet port. |
| Status | Show the status of the Ethernet port. "Up" refers to a status that WAN is enabled and Ethernet cable is connected. "Down" means Ethernet cable is disconnected or WAN function is disabled. |
| Type | Show the dial-up type of the Ethernet port. |
| IP Address | Show the IP address of the Ethernet port. |
| Netmask | Show the netmask of the Ethernet port. |
| Gateway | Show the gateway of the Ethernet port. |
| DNS | Show the DNS of the Ethernet port. |
| Duration | Show the information about how long the Ethernet cable has been connected to the Ethernet port when the port is enabled. Once the port is disabled or Ethernet cable is disconnected, the duration will stop. |

Table 3-1-4-1 WAN Status

3.1.5 WLAN

You can check Wi-Fi status on this page, including the information of access point and client.

| Overview | Packet Forward | Cellular | Network | WLAN |
|---------------------|-------------------|----------|---------|------|
| WLAN Status | | | | |
| Wireless Status | Enabled | | | |
| MAC Address | 24:e1:24:f0:e2:26 | | | |
| Interface Type | AP | | | |
| SSID | Gateway_F0E226 | | | |
| Channel | Auto | | | |
| Encryption Type | No Encryption | | | |
| Status | Up | | | |
| IP Address | 192.168.2.1 | | | |
| Netmask | 255.255.255.0 | | | |
| Connection Duration | 0 days, 00:20:59 | | | |

Figure 3-1-5-1

| WLAN Status | |
|---------------------|--|
| Item | Description |
| Wireless Status | Show the wireless status. |
| MAC Address | Show the MAC address. |
| Interface Type | Show the interface type, such as "AP" or "Client". |
| SSID | Show the SSID. |
| Channel | Show the wireless channel. |
| Encryption Type | Show the encryption type. |
| Status | Show the connection status. |
| IP Address | Show the IP address of the gateway. |
| Netmask | Show the wireless MAC address of the gateway. |
| Gateway | Show the gateway address in wireless network. |
| Connection Duration | Show information on how long the Wi-Fi network has been connected. |

| Bandwidth/MHz | Enter the bandwidth of this channel. Recommended value: 125KHz, 250KHz, 500KHz | Based on the supported frequency |
| Data Rate | Enter the data rate. Range: 500-25000. | 500 |

Table 3-2-1-5 FSK Channel Setting Parameters

3.2.1.3 Noise Analyzer

Noise analyzer is used for scanning the noise of every frequency channel and giving a diagram for users to analyze the environment interference condition and select best deployment. RSSI indicates the sensitivity for every channel. **Lower the RSSI value, better the signal. It's not suggested to enable this feature when using package forwarder since it will affect the downlink transmission.**

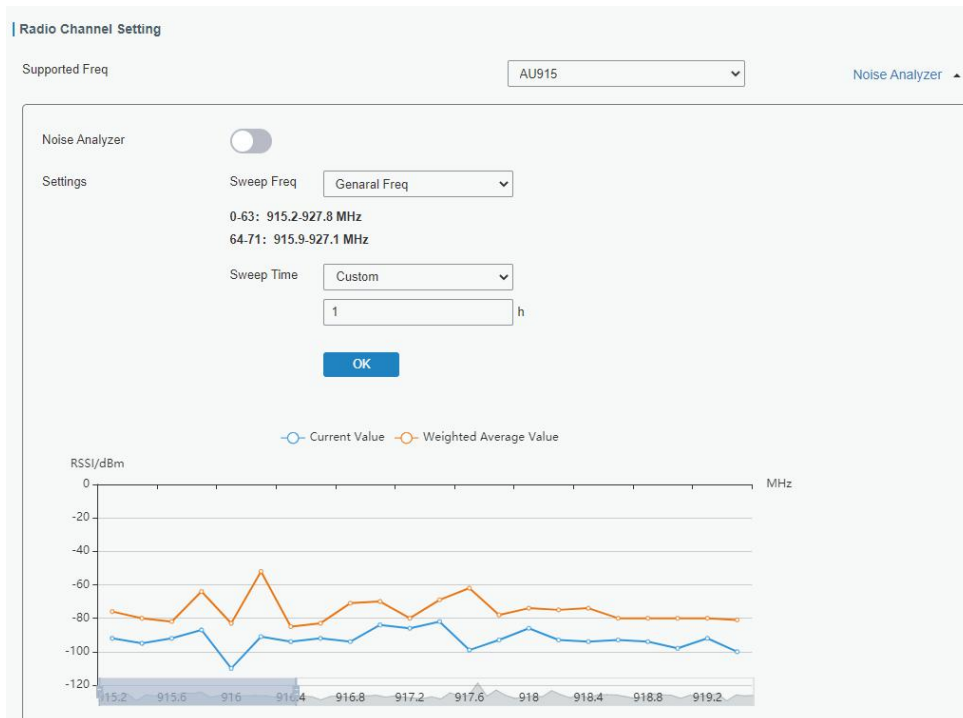

Figure 3-2-1-7

| Noise Analyzer | | |
|----------------|---|--------------|
| Item | Description | Default |
| Enable | Click to enable noise analyzer feature. | Disabled |
| Sweep Freq | Select the frequency sweeping range. General Freq: frequencies based on the LoRaWAN® regional parameters document Custom: custom the frequency range | General Freq |
| Sweep Time | Enable the noise analyzer continuously or within a period of time. If Custom is selected, the noise analyzer will stop automatically after the pre-configured time. Note: It's suggested to custom the time since noise analyzer feature will affect the normal data transmission. | Custom/24h |

Forward CRC Error

Forward CRC Valid

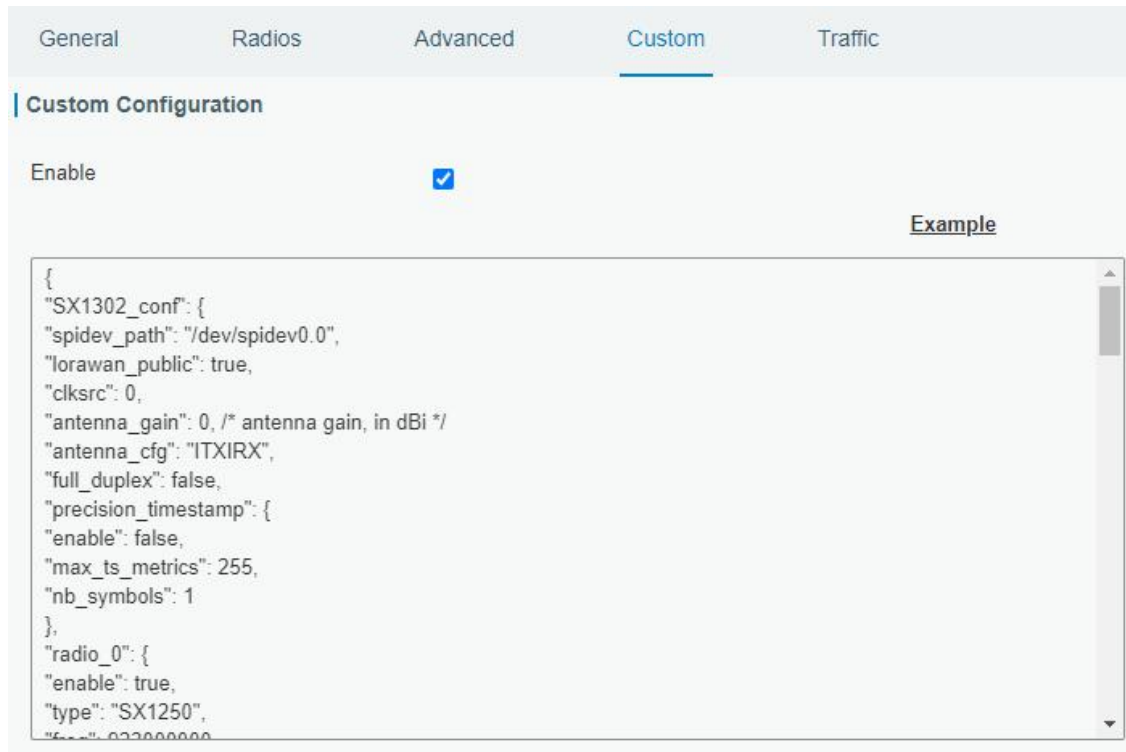

Figure 3-2-1-9

| Item | Description | Default |
|----------------------|--|----------|
| Keep Alive Interval | Enter the interval of keepalive packet which is sent from gateway to network server to keep the connection stable and alive. Range: 1-3600. | 10 |
| Stat Interval | Enter the interval to update the network server with gateway statistics. Range: 1-3600. | 30 |
| Push Timeout | Enter the timeout to wait for the response from server after the gateway sends data of node. Rang: 1-1999. | 100 |
| Forward CRC Disabled | Enable to send packets received with CRC disabled to the network server. | Disabled |
| Forward CRC Error | Enable to send packets received with CRC errors to the network server. | Disabled |

| | | |
|-------------------|---|---------|
| Forward CRC Valid | Enable to send packets received with CRC valid to the network server. | Enabled |
|-------------------|---|---------|

Table 3-2-1-8 Advanced Parameters

3.2.1.5 Custom

The screenshot shows the 'Custom' configuration tab in the Milesight IoT interface. The 'Enable' checkbox is checked. An 'Example' button is located to the right of the configuration area. Below the 'Example' button, a code editor displays the following JSON configuration:

```
{
  "SX1302_conf": {
    "spidev_path": "/dev/spidev0.0",
    "lorawan_public": true,
    "clksrc": 0,
    "antenna_gain": 0, /* antenna gain, in dBi */
    "antenna_cfg": "ITXIRX",
    "full_duplex": false,
    "precision_timestamp": {
      "enable": false,
      "max_ts_metrics": 255,
      "nb_symbols": 1
    },
  },
  "radio_0": {
    "enable": true,
    "type": "SX1250",
    "freq": 033000000
  }
}
```

Figure 3-2-1-10

When Custom Configuration mode is enabled, you can write your own packet forwarder configuration file in the edit box to configure packet forwarder. Click “Save” to save your custom configuration file content, and click “Apply” to take effect. You can click “Clear” to erase all content in the edit box. If you don’t know how to write configuration file, please click “Example” to go to reference page.

3.2.1.6 Traffic

When navigating to the traffic page, any recent traffic received by the gateway will display. To watch live traffic, click **Refresh**.

| Traffic Setting | | | | | | | | | |
|---|-----------|------|------------|-----------|----------|----------|------|-------|--|
| <input type="button" value="Refresh"/> <input type="button" value="Clear"/> | | | | | | | | | |

3.2.2 Network Server

3.2.2.1 General

Figure 3-2-2-1

| Item | Description | Default |
|------------------------|--|--------------|
| General Setting | | |
| Enable | Click to enable Network Server mode. | Enabled |
| Milesight IoT Cloud | Enabled to connect gateway to Milesight IoT Cloud. | Disabled |
| NetID | Enter the network identifier. | 010203 |
| Join Delay | Enter the interval time between when the end-device sends a Join_request_message to network server and when the end-device prepares to open RX1 to receive the Join_accept_message sent from network server. | 5 |
| RX1 Delay | Enter the interval time between when the end-device sends uplink packets and when the end-device prepares to open RX1 to receive the downlink packet. | 1 |
| Lease Time | Enter the amount of time till a successful join expires. The format is hours-minutes-seconds. If the join-type is OTAA, then the end-devices need to join the network server again when it | 876000-00-00 |

| | | |
|-----------------------------|---|-------------------------------|
| | exceeds the lease time. | |
| Log level | Choose the log level. | Info |
| Channel Plan Setting | | |
| Channel Plan | Choose LoRaWAN® channel plan used for the upstream and downlink frequencies and datarates. Available channel plans depend on the gateway's model. | Depend on the gateway's model |
| Channel Mask | <p>Enabled frequencies are controlled using channel mask. Leave it blank means using all the default standard usable channels specified in the LoRaWAN® regional parameters document.</p> <p>A bit in the ChMask field set to 1 means that the corresponding channel can be used for uplink transmissions if this channel allows the data rate currently used by the end-device.</p> <p>A bit set to 0 means the corresponding channels should be avoided.</p> <p>US 915 and AU 915 have a 80-bit channel mask for 72 usable channels and EU, AS, IN, KR frequencies have a 16-bit mask for 16 usable channels.</p> | Depend on the gateway's model |

Table 3-2-2-1 General Parameters

Note: For some regional variants, if allowed by your LoRaWAN® region, you can use Additional Plan to configure additional channels undefined by the LoRaWAN® Regional Parameters, like EU868 and KR920, as the following picture shows:

| Frequency(MHz) | Min Datarate | Max Datarate | Operation |
|----------------|--------------|--------------|-----------|
| | | | + |

Figure 3-2-2

| Additional Channels | | |
|---------------------|--|------------------|
| Item | Description | Default |
| Frequency/MHz | Enter the frequency of the additional plan. | Null. |
| Max Datarate | Enter the max datarate for the end-device. The range is based on what is specified in the LoRaWAN® regional parameters document. | DR0(SF12,125kHz) |
| Min Datarate | Enter the min datarate for the end-device. | DR3(SF9,125kHz) |

| | | |
|--|---|--|
| | The range is based on what is specified in the LoRaWAN® regional parameters document. | |
|--|---|--|

Table 3-2-2-2 Additional Plan Parameters

3.2.2.2 Application

An application is a collection of devices with the same purpose/of the same type. All devices with the same “Payload Codec” and data transmission destination can be added under the same application.

You can edit the application by clicking  or create a new application by clicking .

Figure 3-2-2-3

| Item | Description |
|-------------------|---|
| Name | Enter the name of the application profile. E.g Smoker-sensor-app. |
| Description | Enter the description of this application. E.g a application for smoker sensor. |
| Payload Codec | Select from: “None”, “Cayenne LPP”, “Custom”. None: This mode enables devices not to encode data. Cayenne LPP: This mode enables devices to encode data with the Cayenne Low Power Payload (LPP). Custom: This mode enables devices to encode data with the decoder function and the encoder function which you have entered the code. |
| Data Transmission | Data will be sent to your custom server using the MQTT,HTTP or HTTPS protocol. |

Figure 3-2-2-5

| MQTT Settings | | |
|----------------|--------------------------------------|---------|
| Item | Description | Default |
| General | | |
| Broker Address | MQTT broker address to receive data. | -- |
| Broker Port | MQTT broker port to receive data. | -- |

| | | |
|-------------------------|---|----|
| Client ID | Client ID is the unique identity of the client to the server. It must be unique when all clients are connected to the same server, and it is the key to handle message at QoS 1 and 2. | -- |
| Connection Timeout/s | If the client does not get a response after the connection timeout, the connection will be considered as broken. The Range: 1-65535 | 30 |
| Keep Alive Interval/s | After the client is connected with the server, the client will send heartbeat packet to the server regularly to keep alive. Range: 1-65535 | 60 |
| User Credentials | | |
| Enable | Enable user credentials. | |
| Username | The username used for connecting to MQTT broker. | |
| Password | The password used for connecting to MQTT broker. | |
| TLS | | |
| Enable | Enable the TLS encryption in MQTT communication. | |
| Mode | Select from "Self signed certificates", "CA signed server certificate". CA signed server certificate: verify with the certificate issued by Certificate Authority (CA) that pre-loaded on device. Self signed certificates: upload the custom CA certificates, client certificates and secret key for verification. | |
| Topic | | |
| Data Type | Data type sent to MQTT broker. | |
| Topic | Topic name of the data type using for publish. | |
| QoS | <p>QoS 0 – Only Once This is the fastest method and requires only 1 message. It is also the most unreliable transfer mode.</p> <p>QoS 1 – At Least Once This level guarantees that the message will be delivered at least once, but may be delivered more than once.</p> <p>QoS 2 – Exactly Once QoS 2 is the highest level of service in MQTT. This level guarantees that each message is received only once by the intended recipients. QoS 2 is the safest and slowest quality of service level.</p> | |

[Application configuration](#)

3.2.2.3 Profiles

A Profile defines the device capabilities and boot parameters that are needed by the Network Server for setting the LoRaWAN[®] radio access service. These information elements shall be provided by the end-device manufacturer.

You can edit the device profile by clicking or create a new device profile by clicking

| General | Applications | Profiles | Device | Multicast Groups | Gateway Fleet | Packets |
|------------------------|--------------|-----------|-----------------|------------------|---------------|---------|
| Device Profiles | | | | | | |
| Name | Max TXPower | Join Type | Class Type | Operation | | |
| OTAA-ClassA-B | 0 | OTAA | Class A Class B | | | |
| OTAA-ClassC | 0 | OTAA | Class A Class C | | | |
| node | 0 | OTAA | Class A Class C | | | |
| | | | | | | |

Figure 3-2-2-8

| Device Profiles Settings | | |
|--------------------------|---|---------|
| Item | Description | Default |
| Name | Enter the name of the device profile. E.g. Smoker-sensor-app. | Null |
| Max TXPower | Enter the maximum transmit power. The TXPower indicates power levels relative to the Max EIRP level of the end-device. 0 means using the max EIRP. EIRP refers to the Equivalent Isotropically Radiated Power. | 0 |
| Join Type | Select from: "OTAA" and "ABP". OTAA:Over-the-Air Activation. For over-the-air activation, end-devices must follow a join procedure prior to participating in data exchanges with the network server. An end-device has to go through a new join procedure every time as it has lost the session context information. ABP: Activation by Personalization. Under certain circumstances, end-devices can be activated by personalization. Activation by personalization directly ties an end-device to a specific network bypassing the join request - join accept | OTAA |

| | | |
|------------|---|------|
| | procedure. | |
| Class Type | <p>Device type is Class A by default. Users can check the box of Class B or Class C to add the class type.</p> <p>Note: Beacon period should be set to nonzero value in Packet Forwarder->Advanced if you use Class B.</p> | ---- |

Table 3-2-2-6 Device Profiles Setting Parameters

3.2.2.5 Multicast Groups

Milesight gateways support for creating Class B or Class C multicast groups to send downlink messages to a group of end devices. A multicast group is a virtual ABP device (i.e. shared session keys), does not support uplink, confirmed downlink nor MAC commands.

Figure 3-2-2-12

| Item | Description |
|-------------------|--------------------------------------|

|-------------------------------------|---|----------|
| Item | Description | Default |
| Device EUI | Enter the EUI of the device to receive the payload. | Null |
| Multicast Group | Select the multicast group to send downlinks. Multicast groups can be added under Multicast Groups tab. | Null |
| Type | Choose from: "ASCII", "hex", "base64". Choose the payload type to enter in the payload Input box. | ASCII |
| Payload | Enter the message to be sent to this device. | Null |
| Port | Enter the LoRaWAN® frame port for packet transmission between device and Network Server. | Null |
| Confirmed | After enabled, the end device will receive downlink packet and should answer "confirmed" to the network server. Multicast feature does not support confirmed downlink. | Disabled |

Table 3-2-2-14 Send Data to Device Parameters

| Network Server | |
|------------------|---|
| Item | Description |
| Device EUI/Group | Show the EUI of the device or multicast group. |
| Frequency | Show the used frequency to transmit packets. |
| Datarate | Show the used datarate to transmit packets. |
| SNR | Show the signal-noise ratio. |
| RSSI | Show the received signal strength indicator. |
| Size | Show the size of payload. |
| Fcnt | Show the frame counter. |
| Type | Show the type of the packet: JnAcc - Join Accept Packet JnReq - Join Request Packet UpUnc - Uplink Unconfirmed Packet UpCnf - Uplink Confirmed Packet - ACK response from network requested DnUnc - Downlink Unconfirmed Packet DnCnf - Downlink Confirmed Packet- ACK response from end-device requested |
| Time | Show the time of packet was sent or received. |

Table 3-2-2-15 Packet Parameters

Click  to get more details about the packet. As shown:

| Packet Details | |
|-------------------------|------------------|
| Dev Addr/Multicast Addr | 0614B991 |
| GwEUI | 24E124FFFEF0E225 |
| AppEUI | 24E124C0002A0001 |
| Device EUI/Group Name | 24E124126A210644 |
| Class Type | Class C |
| Immediately | - |
| Timestamp | 2721022973 |
| Type | UpUnc |
| Adr | false |
| AdrAckReq | false |
| Ack | false |
| Fcnt | 969 |
| Port | 85 |

Figure 3-2-2-17

| Item | Description |
|-------------------------|---|
| Dev Addr/Multicast Addr | Show the address of the device/multicast group. |
| GwEUI | Show the EUI of the gateway. |
| AppEUI | Show the EUI of the application. |
| DevEUI/Group Name | Show the EUI of the device/multicast group name. |
| Class Type | Show the class type of the device or multicast group. |
| Immediately | True: Device may transmit an explicit (possibly empty) acknowledgement data message immediately after the reception of a data message requiring a confirmation. |
| Timestamp | Show the timestamp of this packet. |
| Type | Show the type of the packet: JnAcc - Join Accept Packet JnReq - Join Request Packet UpUnc - Uplink Unconfirmed Packet UpCnf - Uplink Confirmed Packet - ACK response from network requested DnUnc - Downlink Unconfirmed Packet DnCnf - Downlink Confirmed Packet- ACK response from end-device requested |
| Adr | True: The end-node has enabled ADR. False: The end-node has not enabled ADR. |
| AdrAckReq | In order to validate that the network is receiving the uplink messages, nodes periodically transmit ADRACKReq message. This is 1 bit long. True: Network should respond in ADR_ACK_DELAY time to confirm that it is receiving the uplink messages. |

| | |
|---------------|--|
| | False: ADR is disabled or Network does not respond in ADR_ACK_DELAY. |
| Ack | True: This frame is ACK. False: This frame is not ACK. |
| Fcnt | Show the frame-counter of this packet. The network server tracks the uplink frame counter and generates the downlink counter for each end-device. |
| FPort | FPort is a multiplexing port field. If the frame payload field is not empty, the port field must be present. If present, a FPort 16 value of 0 indicates that the FRMPayload contains MAC commands only. When this is the case, the FOptsLen field must be zero. FOptsLen is the length of the FOpts field in bytes. |
| Modulation | LoRa means the physical layer uses the LoRa modulation. |
| Bandwidth | Show the bandwidth of this channel. |
| SpreadFactor | Show the spreadFactor of this channel. |
| Bitrate | Show the bitrate of this channel. |
| CodeRate | Show the coderate of this channel. |
| SNR | Show the SNR of this channel. |
| RSSI | Show the RSSI of this channel. |
| Power | Show the transmit power of the device. |
| Payload (b64) | Show the application payload of this packet. |
| Payload (hex) | Show the application payload of this packet. |
| MIC | Show the MIC of this packet. MIC is a cryptographic message integrity code, computed over the fields MHDR, FHDR, FPort and the encrypted FRMPayload. |

3.3 Network

3.3.1 Interface

3.3.1.1 Port

The Ethernet port can be connected with Ethernet cable to get Internet access. It supports 3 connection types.

- **Static IP:** configure IP address, netmask and gateway for Ethernet WAN interface.
- **DHCP Client:** configure Ethernet WAN interface as DHCP Client to obtain IP address automatically.
- **PPPoE:** configure Ethernet WAN interface as PPPoE Client.

Figure 3-3-1-1

| Port Setting | | |
|----------------------|--|-----------------|
| Item | Description | Default |
| Port | The port that is currently set as eth0 port. | eth 0 |
| Connection Type | Select from "Static IP", "DHCP Client" and "PPPoE". | Static IP |
| MTU | Set the maximum transmission unit. | 1500 |
| Primary DNS Server | Set the primary DNS. | 8.8.8.8 |
| Secondary DNS Server | Set the secondary DNS. | 114.114.114.114 |
| Enable NAT | Enable or disable NAT function. When enabled, a private IP can be translated to a public IP. | Enable |

Table 3-3-1-1 Port Parameters

Related Configuration Example

[Ethernet Connection](#)

1. Static IP Configuration

If the external network assigns a fixed IP for the Ethernet port, user can select "Static IP" mode.

Port_1

Port: eth 0

Connection Type: Static IP

IP Address: 192.168.22.112

Netmask: 255.255.255.0

Gateway: 192.168.22.1

MTU: 1500

Primary DNS Server: 8.8.8.8

Secondary DNS Server: 114.114.114.114

Enable NAT:

Multiple IP Address

| IP Address | Netmask | Operation |
|------------|---------|-----------|
| | | + |

Figure 3-3-1-2

| Static IP | | |
|---------------------|--|----------------|
| Item | Description | Default |
| IP Address | Set the IP address which can access Internet. | 192.168.23.150 |
| Netmask | Set the Netmask for Ethernet port. | 255.255.255.0 |
| Gateway | Set the gateway's IP address for Ethernet port. | 192.168.23.1 |
| Multiple IP Address | Set the multiple IP addresses for Ethernet port. | Null |

Table 3-3-1-2 Static IP Parameters

2. DHCP Client

If the external network has DHCP server enabled and has assigned IP addresses to the Ethernet WAN interface, user can select "DHCP client" mode to obtain IP address automatically.

Port_1

Port: eth 0

Connection Type: DHCP Client

MTU: 1500

Use Peer DNS:

Primary DNS Server: 8.8.8.8

Secondary DNS Server: 114.114.114.114

Enable NAT:

Figure 3-3-1-3

| DHCP Client | |
|--------------|--|
| Item | Description |
| Use Peer DNS | Obtain peer DNS automatically during PPP dialing. DNS is necessary when user visits domain name. |

Table 3-3-1-3 DHCP Client Parameters

3. PPPoE

PPPoE refers to a point to point protocol over Ethernet. User has to install a PPPoE client on the basis of original connection way. With PPPoE, remote access devices can get control of each user.

Port_1

Port: eth 0

Connection Type: PPPoE

Username:

Password:

Link Detection Interval(s): 60

Max Retries: 0

MTU: 1500

Use Peer DNS:

Primary DNS Server: 8.8.8.8

Secondary DNS Server: 114.114.114.114

Enable NAT:

Figure 3-3-1-4

| Gateway | |

Figure 3-3-1-6

| WLAN Settings | |
|---------------|----------------------|
| Item | Description |
| Enable | Enable/disable WLAN. |

| | |
|---------------------------|--|
| Work Mode | Select gateway's work mode. The options are "Client" or "AP". |
| BSSID | Fill in the MAC address of the access point. Either SSID or BSSID can be filled to joint the network. |
| SSID | Fill in the SSID of the access point. |
| Client Mode | |
| Scan | Click "Scan" button to search the nearby access point. |
| Encryption Mode | Select encryption mode. The options are "No Encryption", "WEP Open System", "WEP Shared Key", "WPA-PSK", "WPA2-PSK", "WPA-PSK/WPA2-PSK", "WPA-Enterprise", "WPA2-Enterprise" and "WPA-Enterprise/WPA2-Enterprise". |
| Cipher | Select cipher. The options are "Auto", "AES", "TKIP" and "AES/TKIP". |
| Key | Fill the pre-shared key of WEP/WPA encryption. |
| XSupplicant Type | Select from "Peap", "Leap", "TLS" and "TTLS". |
| User | Fill the user of WPA/WPA2-Enterprise. |
| Anonymous Identity | Fill the anonymous identity of WPA/WPA2-Enterprise. |
| Phase2 | Fill the phase2 of WPA/WPA2-Enterprise. |
| Public Server Certificate | The public server certificate used for verifying with WPA/WPA2-Enterprise access point. |
| AP Mode | |
| SSID Broadcast | When SSID broadcast is disabled, other wireless devices can't not find the SSID, and users have to enter the SSID manually to access to the wireless network. |
| AP Isolation | When AP isolation is enabled, all users which access to the AP are isolated without communication with each other. |
| Radio Type | Select Radio type. The options are "802.11b (2.4 GHz)", "802.11g (2.4 GHz)", "802.11n (2.4 GHz)". |
| Channel | Select wireless channel. The options are "Auto", "1", "2"....."11". |
| Encryption Mode | Select encryption mode. The options are "No Encryption", "WEP Open System", "WEP Shared Key", "WPA-PSK", "WPA2-PSK" and "WPA-PSK/WPA2-PSK". |
| Cipher | Select cipher. The options are "Auto", "AES", "TKIP" and "AES/TKIP". |
| Key | Fill the pre-shared key of WPA encryption. |
| Bandwidth | Select bandwidth. The options are "20MHz" and "40MHz". |
| Max Client Number | Set the maximum number of client to access when the gateway is configured as AP. |
| IP Setting | |
| Protocol | Set the protocol in wireless network. |
| IP Address | Set the IP address in wireless network. |
| Netmask | Set the netmask in wireless network. |
| Gateway | Set the gateway in wireless network. |

Table 3-3-1-5 WLAN Parameters

| Port | WLAN | Cellular | Loopback | | | | |

3.3.1.4 Loopback

Loopback interface is used for replacing gateway's ID as long as it is activated. When the interface is DOWN, the ID of the gateway has to be selected again which leads to long convergence time of OSPF. Therefore, Loopback interface is generally recommended as the ID of the gateway.

Loopback interface is a logic and virtual interface on gateway. Under default conditions, there's no loopback interface on gateway, but it can be created as required.

Figure 3-3-1-11

| Loopback | | |
|----------|-------------|---------|
| Item | Description | Default |

| | | |
|-----------------------|---|-----------|
| IP Address | Unalterable | 127.0.0.1 |
| Netmask | Unalterable | 255.0.0.0 |
| Multiple IP Addresses | Apart from the IP above, user can configure other IP addresses. | Null |

Table 3-3-1-9 Loopback Parameters

3.3.2 Firewall

This section describes how to set the firewall parameters, including website block, ACL, DMZ, Port Mapping and MAC Binding.

The firewall implements corresponding control of data flow at entry direction (from Internet to local area network) and exit direction (from local area network to Internet) according to the content features of packets, such as protocol style, source/destination IP address, etc. It ensures that the gateway operate in a safe environment and host in local area network.

3.3.2.1 Security

Figure 3-3-2-1

| Website Blocking | |
|------------------|--|
| URL Address | Enter the HTTP address which you want to block. |
| Keyword | You can block specific website by entering keyword. The maximum number of character allowed is 64. |

Table 3-2-2-1 Security Parameters

3.3.2.2 ACL

Access control list, also called ACL, implements permission or prohibition of access for specified network traffic (such as the source IP address) by configuring a series of matching rules so as to filter the network interface traffic. When gateway receives packet, the field will be analyzed according to the ACL rule applied to the current interface. After the special packet is identified, the permission or prohibition of corresponding packet will be implemented according to preset strategy.

The data package matching rules defined by ACL can also be used by other functions requiring flow distinction.

Figure 3-3-2-2

| Item | Description |
|----------------------------|---|
| ACL Setting | |
| Default Filter Policy | Select from "Accept" and "Deny". The packets which are not included in the access control list will be processed by the default filter policy. |
| Access Control List | |
| Type | Select type from "Extended" and "Standard". |
| ID | User-defined ACL number. Range: 1-199. |
| Action | Select from "Permit" and "Deny". |
| Protocol | Select protocol from "ip", "icmp", "tcp", "udp", and "1-255". |
| Source IP | Source network address (leaving it blank means all). |
| Source Wildcard Mask | Wildcard mask of the source network address. |
| Destination IP | Destination network address (0.0.0.0 means all). |
| Destination Wildcard Mask | Wildcard mask of destination address. |
| Description | Fill in a description for the groups with the same ID. |
| ICMP Type | Enter the type of ICMP packet. Range: 0-255. |
| ICMP Code | Enter the code of ICMP packet. Range: 0-255. |
| Source Port Type | Select source port type, such as specified port, port range, etc. |
| Source Port | Set source port number. Range: 1-65535. |

| | |
|------------------------|--|
| Start Source Port | Set start source port number. Range: 1-65535. |
| End Source Port | Set end source port number. Range: 1-65535. |
| Destination Port Type | Select destination port type, such as specified port, port range, etc. |
| Destination Port | Set destination port number. Range: 1-65535. |
| Start Destination Port | Set start destination port number. Range: 1-65535. |
| End Destination Port | Set end destination port number. Range: 1-65535. |
| More Details | Show information of the port. |
| Interface List | |
| Interface | Select network interface for access control. |
| In ACL | Select a rule for incoming traffic from ACL ID. |
| Out ACL | Select a rule for outgoing traffic from ACL ID. |

Table 3-3-2-2 ACL Parameters

3.3.2.3 DMZ

DMZ is a host within the internal network that has all ports exposed, except those forwarded ports in port mapping.

Figure 3-3-2-3

| DMZ | |
|----------------|---|
| Item | Description |
| Enable | Enable or disable DMZ. |
| DMZ Host | Enter the IP address of the DMZ host on the internal network. |
| Source Address | Set the source IP address which can access to DMZ host. "0.0.0.0/0" means any address. |

Table 3-3-2-3 DMZ Parameters

3.3.2.4 Port Mapping

Port mapping is an application of network address translation (NAT) that redirects a communication request from the combination of an address and port number to another while the packets are traversing a network gateway such as a gateway or firewall.

Click  to add a new port mapping rules.

Figure 3-3-2-4

| Port Mapping | |
|------------------|---|
| Item | Description |
| Source IP | Specify the host or network which can access local IP address. 0.0.0.0/0 means all. |
| Source Port | Enter the TCP or UDP port from which incoming packets are forwarded. Range: 1-65535. |
| Destination IP | Enter the IP address that packets are forwarded to after being received on the incoming interface. |
| Destination Port | Enter the TCP or UDP port that packets are forwarded to after being received on the incoming port(s). Range: 1-65535. |
| Protocol | Select from "TCP" and "UDP" as your application required. |
| Description | The description of this rule. |

Table 3-3-2-4 Port Mapping Parameters

[NAT Application Example](#)

3.3.2.5 MAC Binding

MAC Binding is used for specifying hosts by matching MAC addresses and IP addresses that are in the list of allowed outer network access.

Figure 3-3-2-5

| MAC Binding List | |
|------------------|------------------------------|
| Item | Description |
| MAC Address | Set the binding MAC address. |

| | |
|-------------|--|
| IP Address | Set the binding IP address. |
| Description | Fill in a description for convenience of recording the meaning of the binding rule for each piece of MAC-IP. |

Table 3-3-2-5 MAC Binding Parameters

3.3.3 DHCP

UG67 can be set as a DHCP server to distribute IP address when Wi-Fi work as AP mode.

Figure 3-3-3-1

| DHCP Server | | |
|------------------|--|-----------------|
| Item | Description | Default |
| Enable | Enable or disable DHCP server. | Enable |
| Interface | Only wlan interface is allowed to distribute IP addresses. | wlan0 |
| Start Address | Define the beginning of the pool of IP addresses which will be leased to DHCP clients. | 192.168.1.100 |
| End Address | Define the end of the pool of IP addresses which will be leased to DHCP clients. | 192.168.1.199 |
| Netmask | Define the subnet mask of IP address obtained by DHCP clients from DHCP server. | 255.255.255.0 |
| Lease Time (Min) | Set the lease time on which the client can use the IP address obtained from DHCP server. Range: 1-10080. | 1440 |
| Primary | Set the primary DNS server. | 114.114.114.114 |

| | | |
|----------------------|---|------|
| DNS Server | | |
| Secondary DNS Server | Set the secondary DNS server. | Null |
| Windows Name Server | Define the Windows Internet Naming Service obtained by DHCP clients from DHCP sever. Generally you can leave it blank. | Null |
| Static IP | | |
| MAC Address | Set a static and specific MAC address for the DHCP client (it should be different from other MACs so as to avoid conflict). | Null |
| IP Address | Set a static and specific IP address for the DHCP client (it should be outside of the DHCP range). | Null |

Table 3-3-3-1 DHCP Server Parameters

3.3.4 DDNS

Dynamic DNS (DDNS) is a method that automatically updates a name server in the Domain Name System, which allows user to alias a dynamic IP address to a static domain name. DDNS serves as a client tool and needs to coordinate with DDNS server. Before starting configuration, user shall register on a website of proper domain name provider and apply for a domain name.

The screenshot shows a web-based configuration page for DDNS. At the top, there is a 'DDNS' header. Below it, a section titled 'DDNS Method List' contains a table with the following columns: Name, Interface, Service Type, Username, User ID, Password, Server, Server Path, Hostname, Append IP, and Operation. The 'Interface' column is set to 'wlan0' and the 'Service Type' column is set to 'DynDI'. There are input fields for 'Username', 'User ID', and 'Password', and a dropdown for 'Server'. The 'Append IP' column has a checkbox that is currently unchecked. There are 'X' and '+' icons for deleting and adding entries, respectively.

Figure 3-3-4-1

| DDNS | |
|--------------|--|
| Item | Description |
| Name | Give the DDNS a descriptive name. |
| Interface | Set interface bundled with the DDNS. |
| Service Type | Select the DDNS service provider. |
| Username | Enter the username for DDNS register. |
| User ID | Enter User ID of the custom DDNS server. |
| Password | Enter the password for DDNS register. |
| Server | Enter the name of DDNS server. |
| Hostname | Enter the hostname for DDNS. |
| Append IP | Append your current IP to the DDNS server update path. |

Table 3-3-4-1 DDNS Parameters

3.3.5 Link Failover

This section describes how to configure link failover strategies, such as VRRP strategies.

Configuration Steps

1. Define one or more SLA operations (ICMP probe).
2. Define one or more track objects to track the status of SLA operation.
3. Define applications associated with track objects, such as VRRP or static routing.

3.3.5.1 SLA

SLA setting is used for configuring link probe method. The default probe type is ICMP.

Figure 3-3-5-1

| SLA | | |
|-------------------------------|--|-----------------|
| Item | Description | Default |
| ID | SLA index. Up to 10 SLA settings can be added. Range: 1-10. | 1 |
| Type | ICMP-ECHO is the default type to detect if the link is alive. | icmp-echo |
| Destination Address | The detected IP address. | 114.114.114.114 |
| Secondary Destination Address | The secondary detected IP address. | 8.8.8.8 |
| Data Size | User-defined data size. Range: 0-1000. | 56 |
| Interval (s) | User-defined detection interval. Range: 1-608400. | 30 |
| Timeout (ms) | User-defined timeout for response to determine ICMP detection failure. Range: 1-300000. | 5000 |
| Packet Loss Count | Define packet loss count in each SLA probe. SLA probe fails when the preset packet loss count is exceeded. | 5 |
| Start Time | Detection start time; select from "Now" and blank character. Blank character means this SLA detection doesn't start. | now |

Table 3-3-5-1 SLA Parameters

3.3.5.2 Track

Track setting is designed for achieving linkage among SLA module, Track module and Application module. Track setting is located between application module and SLA module with main function of shielding the differences of various SLA modules and providing unified interfaces for application module.

Linkage between Track Module and SLA module

Once you complete the configuration, the linkage relationship between Track module and SLA module will be established. SLA module is used for detection of link status, network performance and notification of Track module. The detection results help track status change timely.

- For successful detection, the corresponding track item is Positive.
- For failed detection, the corresponding track item is Negative.

Linkage between Track Module and Application Module

After configuration, the linkage relationship between Track module and Application module will be established. When any change occurs in track item, a notification that requires corresponding treatment will be sent to Application module.

Currently, the application modules like VRRP and static routing can get linkage with track module.

If it sends an instant notification to Application module, the communication may be interrupted in some circumstances due to routing's failure like timely restoration or other reasons. Therefore, user can set up a period of time to delay notifying application module when the track item status changes.

| ID | Type | SLA ID | Interface | Negative Delay(s) | Positive Delay(s) | Operation |
|----|------|--------|-----------|-------------------|-------------------|-----------|
| 1 | sla | 1 | wlan0 | 0 | 1 | X |

Figure 3-3-5-2

| Item | Description | Default |
|--------------------|---|-----------|
| Index | Track index. Up to 10 track settings can be configured. Range: 1-10. | 1 |
| Type | The options are "sla" and "interface". | SLA |
| SLA ID | Defined SLA ID. | 1 |
| Interface | Select the interface whose status will be detected. | cellular0 |
| Negative Delay (s) | When interface is down or SLA probing fails, it will wait according to the time set here before actually changing its status to Down. Range: 0-180 (0 refers to immediate switching). | 0 |

| | | |
|--------------------|--|---|
| Positive Delay (s) | When failure recovery occurs, it will wait according to the time set here before actually changing its status to Up. Range: 0-180 (0 refers to immediate switching). | 1 |
|--------------------|--|---|

Table 3-3-5-2 Track Parameters

3.3.5.3 WAN Failover

WAN failover refers to failover between Ethernet WAN interface and cellular interface. When service transmission can't be carried out normally due to malfunction of a certain interface or lack of bandwidth, the rate of flow can be switched to backup interface quickly. Then the backup interface will carry out service transmission and share network flow so as to improve reliability of communication of data equipment.

When link state of main interface is switched from up to down, system will have the pre-set delay works instead of switching to link of backup interface immediately. Only if the state of main interface is still down after delay, will the system switch to link of backup interface. Otherwise, system will remain unchanged.

| Main Interface | Backup Interface | Startup Delay(s) | Up Delay(s) | Down Delay(s) | Track ID | Operation |
|----------------|------------------|------------------|-------------|---------------|----------|-----------|
| Cellular 0 | eth 0 | 30 | 0 | 0 | 1 | X |

Figure 3-3-5-3

| WAN Failover | | |
|-------------------|--|---------|
| Parameters | Description | Default |
| Main Interface | Select a link interface as the main link. | -- |
| Backup Interface | Select a link interface as the backup link. | -- |
| Startup Delay (s) | Set how long to wait for the startup tracking detection policy to take effect. Range: 0-300. | 30 |
| Up Delay (s) | When the primary interface switches from failed detection to successful detection, switching can be delayed based on the set time. Range: 0-180 (0 refers to immediate switching) | 0 |
| Down Delay (s) | When the primary interface switches from successful detection to failed detection, switching can be delayed based on the set time. Range: 0-180 (0 refers to immediate switching). | 0 |
| Track ID | Track detection, select the defined track ID. | -- |

Table 3-3-5-3 WAN Failover Parameters

3.3.6 VPN

Virtual Private Networks, also called VPNs, are used to securely connect two private networks together so that devices can connect from one network to the other network via secure channels.

UG67 supports DMVPN, IPsec, GRE, L2TP, PPTP, OpenVPN, as well as GRE over IPsec and L2TP over IPsec.

3.3.6.1 DMVPN

A dynamic multi-point virtual private network (DMVPN), combining mGRE and IPsec, is a secure network that exchanges data between sites without passing traffic through an organization's headquarter VPN server or gateway.

Figure 3-3-6-1

Figure 3-3-6-2

| DMVPN | |
|------------------|---|
| Item | Description |
| Enable | Enable or disable DMVPN. |
| Hub Address | The IP address or domain name of DMVPN Hub. |
| Local IP address | DMVPN local tunnel IP address. |

| | |
|--------------------------|---|
| GRE Hub IP Address | GRE Hub tunnel IP address. |
| GRE Local IP Address | GRE local tunnel IP address. |
| GRE Netmask | GRE local tunnel netmask. |
| GRE Key | GRE tunnel key. |
| Negotiation Mode | Select from "Main" and "Aggressive". |
| Authentication Algorithm | Select from "DES", "3DES", "AES128", "AES192" and "AES256". |
| Encryption Algorithm | Select from "MD5" and "SHA1". |
| DH Group | Select from "MODP768_1", "MODP1024_2" and "MODP1536_5". |
| Key | Enter the preshared key. |
| Local ID Type | Select from "Default", "ID", "FQDN", and "User FQDN" |
| IKE Life Time (s) | Set the lifetime in IKE negotiation. Range: 60-86400. |
| SA Algorithm | Select from "DES_MD5", "DES_SHA1", "3DES_MD5", "3DES_SHA1", "AES128_MD5", "AES128_SHA1", "AES192_MD5", "AES192_SHA1", "AES256_MD5" and "AES256_SHA1". |
| PFS Group | Select from "NULL", "MODP768_1", "MODP1024_2" and "MODP1536-5". |
| Life Time (s) | Set the lifetime of IPsec SA. Range: 60-86400. |
| DPD Interval Time (s) | Set DPD interval time |
| DPD Timeout (s) | Set DPD timeout. |
| Cisco Secret | Cisco Nhrp key. |
| NHRP Holdtime (s) | The holdtime of Nhrp protocol. |

Table 3-3-6-1 DMVPN Parameters

3.3.6.2 IPsec

IPsec is especially useful for implementing virtual private networks and for remote user access through dial-up connection to private networks. A big advantage of IPsec is that security arrangements can be handled without requiring changes to individual user computers.

IPsec provides three choices of security service: Authentication Header (AH), Encapsulating Security Payload (ESP), and Internet Key Exchange (IKE). AH essentially allows authentication of the senders' data. ESP supports both authentication of the sender and data encryption. IKE is used for cipher code exchange. All of them can protect one and more data flows between hosts, between host and gateway, and between gateways.

| IPsec Advanced | |
| Enable Compression | The head of IP packet will be compressed after it's enabled. |
| VPN Over IPsec Type | Select from "NONE", "GRE" and "L2TP" to enable VPN over IPsec function. |

Table 3-3-6-3 IPsec Parameters

3.3.6.3 GRE

Generic Routing Encapsulation (GRE) is a protocol that encapsulates packets in order to route other protocols over IP networks. It's a tunneling technology that provides a channel through which encapsulated data message can be transmitted and encapsulation and decapsulation can be realized at both ends.

In the following circumstances the GRE tunnel transmission can be applied:

- GRE tunnel can transmit multicast data packets as if it were a true network interface. Single use of IPsec cannot achieve the encryption of multicast.
- A certain protocol adopted cannot be routed.
- A network of different IP addresses shall be required to connect other two similar networks.

The screenshot displays the 'GRE Settings' configuration page. At the top, there are tabs for 'DMVPN', 'IPsec', 'GRE' (selected), 'L2TP', and 'PPTP'. Below the tabs, the 'GRE Settings' section is visible, with a sub-section for 'GRE_1'. The configuration includes several fields and checkboxes:

- Enable:** Checked (checkbox).
- Remote IP Address:** Empty text input field.
- Local IP Address:** Empty text input field.
- Local Virtual IP Address:** Empty text input field.
- Netmask:** Text input field containing '255.255.255.0'.
- Peer Virtual IP Address:** Empty text input field.
- Global Traffic Forwarding:** Unchecked (checkbox).
- Remote Subnet:** Empty text input field.
- Remote Netmask:** Empty text input field.
- MTU:** Text input field containing '1500'.
- Key:** Empty text input field.
- Enable NAT:** Checked (checkbox).

Figure 3-3-6-5

| GRE | |
|--------|-------------------------------|
| Item | Description |
| Enable | Check to enable GRE function. |

| | |
|---------------------------|---|
| Remote IP Address | Enter the real remote IP address of GRE tunnel. |
| Local IP Address | Set the local IP address. |
| Local Virtual IP Address | Set the local tunnel IP address of GRE tunnel. |
| Netmask | Set the local netmask. |
| Peer Virtual IP Address | Enter remote tunnel IP address of GRE tunnel. |
| Global Traffic Forwarding | All the data traffic will be sent out via GRE tunnel when this function is enabled. |
| Remote Subnet | Enter the remote subnet IP address of GRE tunnel. |
| Remote Netmask | Enter the remote netmask of GRE tunnel. |
| MTU | Enter the maximum transmission unit. Range: 64-1500. |
| Key | Set GRE tunnel key. |
| Enable NAT | Enable NAT traversal function. |

Table 3-3-6-4 GRE Parameters

3.3.6.4 L2TP

Layer Two Tunneling Protocol (L2TP) is an extension of the Point-to-Point Tunneling Protocol (PPTP) used by an Internet service provider (ISP) to enable the operation of a virtual private network (VPN) over the Internet.

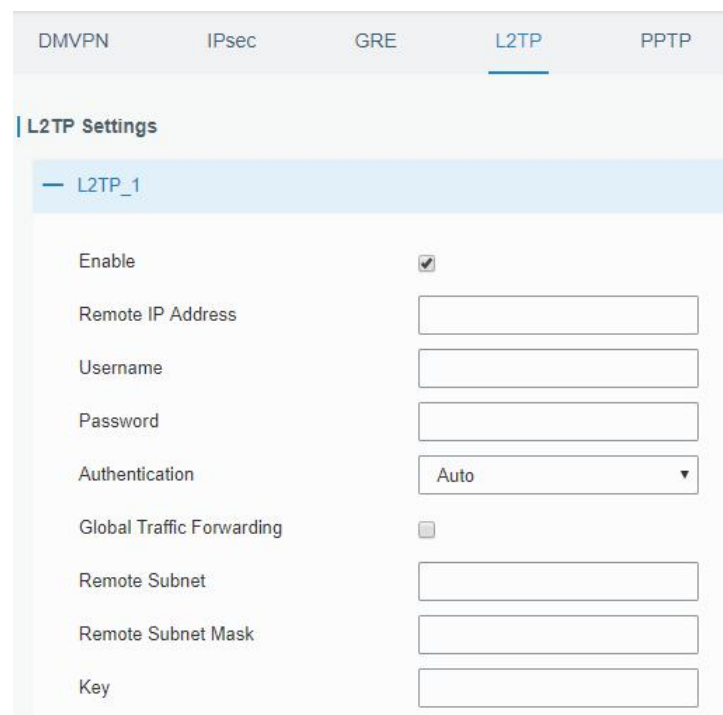

Figure 3-3-6-6

| L2TP | |
|-------------------|--|
| Item | Description |
| Enable | Check to enable L2TP function. |
| Remote IP Address | Enter the public IP address or domain name of L2TP server. |
| Username | Enter the username that L2TP server provides. |
| Password | Enter the password that L2TP server provides. |

| | |
|---------------------------|--|
| Authentication | Select from "Auto", "PAP", "CHAP", "MS-CHAPv1" and "MS-CHAPv2". |
| Global Traffic Forwarding | All of the data traffic will be sent out via L2TP tunnel after this function is enabled. |
| Remote Subnet | Enter the remote IP address that L2TP protects. |
| Remote Subnet Mask | Enter the remote netmask that L2TP protects. |
| Key | Enter the password of L2TP tunnel. |

Table 3-3-6-5 L2TP Parameters

Figure 3-3-6-7

| Advanced Settings | |
|-----------------------------|--|
| Item | Description |
| Local IP Address | Set tunnel IP address of L2TP client. Client will obtain tunnel IP address automatically from the server when it's null. |
| Peer IP Address | Enter tunnel IP address of L2TP server. |
| Enable NAT | Enable NAT traversal function. |
| Enable MPPE | Enable MPPE encryption. |
| Address/Control Compression | For PPP initialization. User can keep the default option. |
| Protocol Field Compression | For PPP initialization. User can keep the default option. |
| Asyncmap Value | One of the PPP protocol initialization strings. User can keep the default value. Range: 0-ffffff. |
| MRU | Set the maximum receive unit. Range: 64-1500. |
| MTU | Set the maximum transmission unit. Range: 64-1500 |
| Link Detection Interval | Set the link detection interval time to ensure tunnel |

| | |
|----------------|---|
| (s) | connection. Range: 0-600. |
| Max Retries | Set the maximum times of retry to detect the L2TP connection failure. Range: 0-10. |
| Expert Options | User can enter some other PPP initialization strings in this field and separate the strings with blank space. |

Table 3-3-6-6 L2TP Parameters

3.3.6.5 PPTP

Point-to-Point Tunneling Protocol (PPTP) is a protocol that allows corporations to extend their own corporate network through private "tunnels" over the public Internet. Effectively, a corporation uses a wide-area network as a single large local area network.

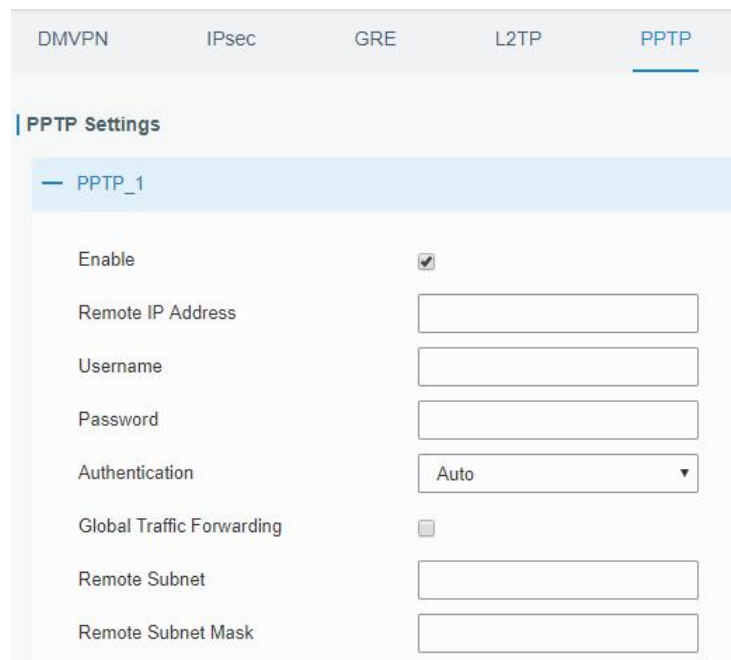

Figure 3-3-6-8

| PPTP | |
|---------------------------|---|
| Item | Description |
| Enable | Enable PPTP client. A maximum of 3 tunnels is allowed. |
| Remote IP Address | Enter the public IP address or domain name of PPTP server. |
| Username | Enter the username that PPTP server provides. |
| Password | Enter the password that PPTP server provides. |
| Authentication | Select from "Auto", "PAP", "CHAP", "MS-CHAPv1", and "MS-CHAPv2". |
| Global Traffic Forwarding | All of the data traffic will be sent out via PPTP tunnel once enable this function. |
| Remote Subnet | Set the peer subnet of PPTP. |
| Remote Subnet Mask | Set the netmask of peer PPTP server. |

Table 3-3-6-7 PPTP Parameters

Figure 3-3-6-9

| PPTP Advanced Settings | |
|-----------------------------|---|
| Item | Description |
| Local IP Address | Set IP address of PPTP client. |
| Peer IP Address | Enter tunnel IP address of PPTP server. |
| Enable NAT | Enable the NAT function of PPTP. |
| Enable MPPE | Enable MPPE encryption. |
| Address/Control Compression | For PPP initialization. User can keep the default option. |
| Protocol Field Compression | For PPP initialization. User can keep the default option. |
| Asyncmap Value | One of the PPP protocol initialization strings. User can keep the default value. Range: 0-ffffff. |
| MRU | Enter the maximum receive unit. Range: 0-1500. |
| MTU | Enter the maximum transmission unit. Range: 0-1500. |
| Link Detection Interval (s) | Set the link detection interval time to ensure tunnel connection. Range: 0-600. |
| Max Retries | Set the maximum times of retrying to detect the PPTP connection failure. Range: 0-10. |
| Expert Options | User can enter some other PPP initialization strings in this field and separate the strings with blank space. |

Table 3-3-6-8 PPTP Parameters

3.3.6.6 OpenVPN Client

OpenVPN is an open source virtual private network (VPN) product that offers a simplified security framework, modular network design, and cross-platform portability.

Advantages of OpenVPN include:

- Security provisions that function against both active and passive attacks.
- Compatibility with all major operating systems.
- High speed (1.4 megabytes per second typically).
- Ability to configure multiple servers to handle numerous connections simultaneously.
- All encryption and authentication features of the OpenSSL library.
- Advanced bandwidth management.
- A variety of tunneling options.
- Compatibility with smart cards that support the Windows Crypt application program interface (API).

The screenshot displays the 'OpenVPN Client Settings' page. At the top, there are navigation tabs: DMVPN, IPsec, GRE, L2TP, PPTP, **OpenVPN Client**, OpenVPN Server, and Certificatio. Below the tabs, the 'OpenVPN Client Settings' section is visible. A sub-section titled 'OpenVPN_1' contains the following settings:

- Enable:
- Protocol: UDP (dropdown)
- Remote IP Address: (text input)
- Port: 1194 (text input)
- Interface: tun (dropdown)
- Authentication: None (dropdown)
- Local Tunnel IP: (text input)
- Remote Tunnel IP: (text input)
- Enable NAT:
- Compression: LZO (dropdown)
- Link Detection Interval(s): 60 (text input)
- Link Detection Timeout(s): 300 (text input)

- Verbose Level: ERROR (dropdown)
- Expert Options: (text input)

At the bottom, there is a 'Local Route' section with a table structure:

| Subnet | Subnet Mask | Operation |
|--------|-------------|-----------|
| | | + |

Figure 3-3-6-10

| OpenVPN Client | |
|----------------|---|
| Item | Description |
| Enable | Enable OpenVPN client. A maximum of 3 tunnels is allowed. |

| | |
|-----------------------------|---|
| Protocol | Select from "UDP" and "TCP". |
| Remote IP Address | Enter remote OpenVPN server's IP address or domain name. |
| Port | Enter the listening port number of remote OpenVPN server. Range: 1-65535. |
| Interface | Select from "tun" and "tap". |
| Authentication | Select from "None", "Pre-shared", "Username/Password", "X.509 cert", and "X.509 cert+user". |
| Local Tunnel IP | Set local tunnel address. |
| Remote Tunnel IP | Enter remote tunnel address. |
| Global Traffic Forwarding | All the data traffic will be sent out via OpenVPN tunnel when this function is enabled. |
| Enable TLS Authentication | Check to enable TLS authentication. |
| Username | Enter username provided by OpenVPN server. |
| Password | Enter password provided by OpenVPN server. |
| Enable NAT | Enable NAT traversal function. |
| Compression | Select LZO to compress data. |
| Link Detection Interval (s) | Set link detection interval time to ensure tunnel connection. Range: 10-1800. |
| Link Detection Timeout (s) | Set link detection timeout. OpenVPN will be reestablished after timeout. Range: 60-3600. |
| Cipher | Select from "NONE", "BF-CBC", "DE-CBC", "DES-EDE3-CBC", "AES-128-CBC", "AES-192-CBC" and "AES-256-CBC". |
| MTU | Enter the maximum transmission unit. Range: 128-1500. |
| Max Frame Size | Set the maximum frame size. Range: 128-1500. |
| Verbose Level | Select from "ERROR", "WARNING", "NOTICE" and "DEBUG". |
| Expert Options | User can enter some other PPP initialization strings in this field and separate the strings with blank space. |
| Local Route | |
| Subnet | Set the local route's IP address. |
| Subnet Mask | Set the local route's netmask. |

Table 3-3-6-9 OpenVPN Client Parameters

3.3.6.7 OpenVPN Server

UG67 supports OpenVPN server to create secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities.

|------------------|--|
| Item | Description |
| Enable | Enable/disable OpenVPN server. |
| Protocol | Select from TCP and UDP. |
| Port | Fill in listening port number. Range: 1-65535. |
| Listening IP | Enter WAN IP address or LAN IP address. Leaving it blank refers to all active WAN IP and LAN IP address. |
| Interface | Select from "tun" and "tap". |
| Authentication | Select from "None", "Pre-shared", "Username/Password", "X.509 cert" and "X.509 cert +user". |
| Local Virtual IP | The local tunnel address of OpenVPN's tunnel. |

| | |
|---------------------------|---|
| Remote Virtual IP | The remote tunnel address of OpenVPN's tunnel. |
| Client Subnet | Local subnet IP address of OpenVPN client. |
| Client Netmask | Local netmask of OpenVPN client. |
| Renegotiation Interval(s) | Set interval for renegotiation. Range: 0-86400. |
| Max Clients | Maximum OpenVPN client number. Range: 1-128. |
| Enable CRL | Enable CRL |
| Enable Client to Client | Allow access between different OpenVPN clients. |
| Enable Dup Client | Allow multiple users to use the same certification. |
| Enable NAT | Check to enable the NAT traversal function. |
| Compression | Select "LZO" to compress data. |
| Link Detection Interval | Set link detection interval time to ensure tunnel connection. Range: 10-1800. |
| Cipher | Select from "NONE", "BF-CBC", "DES-CBC", "DES-EDE3-CBC", "AES-128-CBC", "AES-192-CBC" and "AES-256-CBC". |
| MTU | Enter the maximum transmission unit. Range: 64-1500. |
| Max Frame Size | Set the maximum frame size. Range: 64-1500. |
| Verbose Level | Select from "ERROR", "WARNING", "NOTICE" and "DEBUG". |
| Expert Options | User can enter some other PPP initialization strings in this field and separate the strings with blank space. |
| Local Route | |
| Subnet | The real local IP address of OpenVPN client. |
| Netmask | The real local netmask of OpenVPN client. |
| Account | |
| Username & Password | Set username and password for OpenVPN client. |

Table 3-3-6-10 OpenVPN Server Parameters

3.3.6.8 Certifications

User can import/export certificate and key files for OpenVPN and IPsec on this page.

The screenshot shows a web interface for managing OpenVPN Client Certifications. The breadcrumb path is: DMVPN > IPsec > GRE > L2TP > PPTP > OpenVPN Client > OpenVPN Server > Certifications. Under the 'OpenVPN Client' section, there is a sub-section for 'OpenVPN client_1'. It contains a table with the following items:

| Item | Description |
|---------------|------------------------------------|
| CA | Import/Export CA certificate file. |
| Public Key | |
| Private Key | |
| TA | |
| Preshared Key | |
| PKCS12 | |

Table 3-3-6-13 IPsec Parameters

3.4 System

This section describes how to configure general settings, such as administration account, access service, system time, common user management, SNMP, event alarms, etc.

3.4.1 General Settings

3.4.1.1 General

General settings include system info, access service and HTTPS certificates.

| General | System Time | SMTP | Phone | Email | Storage |
|-------------------------------------|--|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|
| System | | | | | |
| Hostname | <input type="text" value="GATEWAY"/> | | | | |
| Web Login Timeout(s) | <input type="text" value="1800"/> | | | | |
| Access Service | | | | | |
| Enable | Service | Port | | | |
| <input checked="" type="checkbox"/> | HTTP | <input type="text" value="80"/> | | | |
| <input checked="" type="checkbox"/> | HTTPS | <input type="text" value="443"/> | | | |
| <input type="checkbox"/> | TELNET | <input type="text" value="23"/> | | | |
| <input checked="" type="checkbox"/> | SSH | <input type="text" value="22"/> | | | |
| HTTPS Certificates | | | | | |
| Certificate | <input type="text" value="https.crt"/> | <input type="button" value="Browse"/> | <input type="button" value="Import"/> | <input type="button" value="Export"/> | <input type="button" value="Delete"/> |
| Key | <input type="text" value="https.key"/> | <input type="button" value="Browse"/> | <input type="button" value="Import"/> | <input type="button" value="Export"/> | <input type="button" value="Delete"/> |

Figure 3-4-1-1

| General | | |
|---------------|--|---------|
| Item | Description | Default |
| System | | |
| Hostname | User-defined gateway name, needs to start with a letter. | GATEWAY |

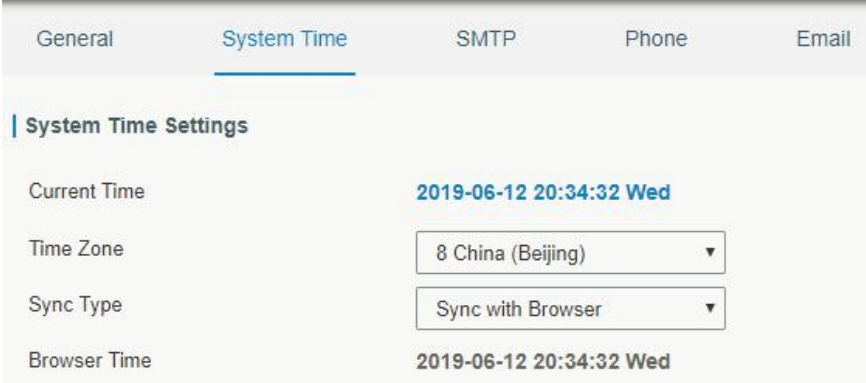

| | | |
|---------------------------|---|------|
| Web Login Timeout (s) | You need to log in again if it times out. Range: 100-3600. | 1800 |
| Access Service | | |
| Port | Set port number of the services. Range: 1-65535. | -- |
| HTTP | Users can log in the device locally via HTTP to access and control it through Web after the option is checked. | 80 |
| HTTPS | Users can log in the device locally and remotely via HTTPS to access and control it through Web after option is checked. | 443 |
| TELNET | Users can log in the device locally and remotely via TELNET to access and control it through Web after option is checked. | 23 |
| SSH | Users can log in the device locally and remotely via SSH after the option is checked. | 22 |
| HTTPS Certificates | | |
| Certificate | Click "Browse" button, choose certificate file on the PC, and then click "Import" button to upload the file into gateway. Click "Export" button will export the file to the PC. Click "Delete" button will delete the file. | -- |
| Key | Click "Browse" button, choose key file on the PC, and then click "Import" button to upload the file into gateway. Click "Export" button will export file to the PC. Click "Delete" button will delete the file. | -- |

Table 3-4-1-1 General Setting Parameters

3.4.1.2 System Time

This section explains how to set the system time including time zone and time synchronization type.

Note: to ensure that the gateway runs with the correct time, it's recommended that you set the system time when configuring the gateway.

The screenshot shows the 'System Time' configuration page. At the top, there are navigation tabs: 'General', 'System Time' (which is selected), 'SMTP', 'Phone', and 'Email'. Below the tabs, the page title is 'System Time Settings'. There are four rows of settings:

- Current Time:** 2019-06-12 20:34:32 Wed
- Time Zone:** A dropdown menu showing '8 China (Beijing)'.
- Sync Type:** A dropdown menu showing 'Sync with Browser'.
- Browser Time:** 2019-06-12 20:34:32 Wed

Figure 3-4-1-2

The screenshot shows the 'System Time' settings page. The 'Current Time' is 2019-06-12 20:33:59 Wed. The 'Time Zone' is set to '8 China (Beijing)'. The 'Sync Type' is 'Set up Manually'. The 'Date' is 2019-06-12 and the 'Time' is 20:33:59.

Figure 3-4-1-3

The screenshot shows the 'System Time' settings page. The 'Current Time' is 2019-06-12 20:33:36 Wed. The 'Time Zone' is '8 China (Beijing)'. The 'Sync Type' is 'Sync with NTP Server'. The 'NTP Server Address' is 1.cn.pool.ntp.org. The 'Enable NTP Server' checkbox is unchecked.

Figure 3-4-1-4

| System Time | |
|----------------------|---|
| Item | Description |
| Current Time | Show the current system time. |
| Time Zone | Click the drop down list to select the time zone you are in. |
| Sync Type | Click the drop down list to select the time synchronization type. |
| Sync with Browser | Synchronize time with browser. |
| Browser Time | Show the current time of browser. |
| Set up Manually | Manually configure the system time. |
| Sync with NTP Server | Synchronize time with NTP server so as to achieve time synchronization of all devices equipped with a clock on network. |
| Sync with NTP Server | |
| NTP Server Address | Set NTP server address (domain name/IP). |
| Enable NTP Server | NTP client on the network can achieve time synchronization with gateway after "Enable NTP Server" option is checked. |

Table 3-4-1-2 System Time Parameters

3.4.1.3 SMTP

SMTP, short for Simple Mail Transfer Protocol, is a TCP/IP protocol used in sending and receiving e-mail. This section describes how to configure email settings.

Figure 3-4-1-5

| SMTP | |
|-----------------------------|---|
| Item | Description |
| SMTP Client Settings | |
| Enable | Enable or disable SMTP client function. |
| Email Address | Enter the sender's email account. |
| Password | Enter the sender's email password. |
| SMTP Server Address | Enter SMTP server's domain name. |
| Port | Enter SMTP server port. Range: 1-65535. |
| Enable TLS | Enable or disable TLS encryption. |

Table 3-4-1-3 SMTP Setting

3.4.1.4 Phone

Phone settings involve in call/SMS trigger and SMS alarm for events. This is only applied to gateway with cellular feature.

1. Add phone list.
2. Select phone numbers and add them to the phone group.
3. Go to "Network > Interface > Cellular > Connection Mode > Connect on Demand > Trigger by Call / Trigger by SMS" or go to "System > Events > Event Settings > SMS" and then select the phone group ID.

Figure 3-4-1-6

| Phone | |
|--------------------------|--|
| Item | Description |
| Phone Number List | |
| Number | Enter the telephone number. Digits, "+" and "-" are allowed. |
| Description | The description of the telephone number. |
| Phone Group List | |
| Group ID | Set number for phone group. Range: 1-100. |
| Description | The description of the phone group. |
| List | Show the phone list. |
| Selected | Show the selected phone number. |

3.4.1.5 Email

Email settings involve email alarm for events.

1. Add email list.
2. Select email addresses and add them to the phone group.
3. Go to "System > Events > Event Settings > Email" and then select the email group ID.

Figure 3-4-1-7

| Email | |
|-------------------------|---|
| Item | Description |
| Email List | |
| Email Address | Enter the Email address. |
| Description | The description of the Email address. |
| Email Group List | |
| Group ID | Set number for email group. Range: 1-100. |
| Description | The description of the Email group. |
| List | Show the Email address list. |
| Selected | Show the selected Email address. |

Table 3-4-1-5 Email Settings

3.4.2 User Management

3.4.2.1 Account

Here you can change the login username and password of the administrator.

Note: it is strongly recommended that you modify them for the sake of security.

Figure 3-4-2-1

| Account | |
|----------------------|--|
| Item | Description |
| Username | Enter a new username. You can use characters such as a-z, 0-9, "_", "-", "\$". The first character can't be a digit. |
| Old Password | Enter the old password. |
| New Password | Enter a new password. |
| Confirm New Password | Enter the new password again. |

Table 3-4-2-1 Account Information

3.4.2.2 User Management

This section describes how to create common user accounts.

The common user permission includes Read-Only and Read-Write.

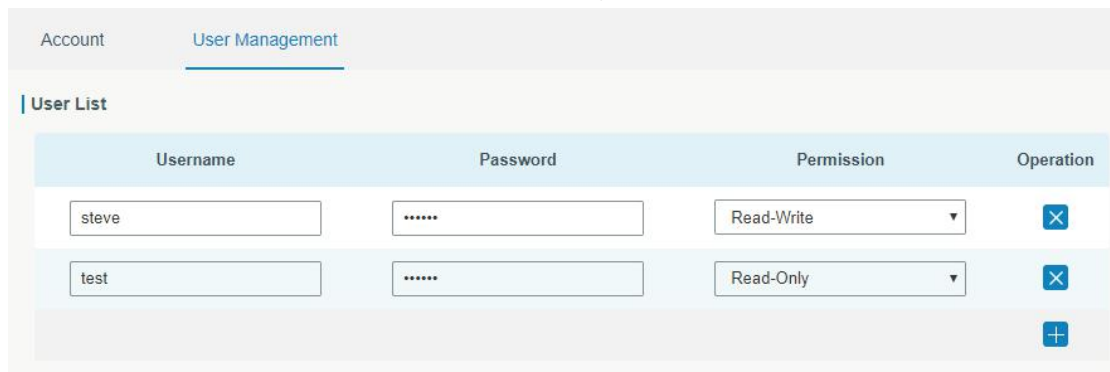

Figure 3-4-2-2

| User Management | |
|-----------------|--|
| Item | Description |
| Username | Enter a new username. You can use characters such as a-z, 0-9, "_", "-", "\$". The first character can't be a digit. |
| Password | Set password. |
| Permission | Select user permission from "Read-Only" and "Read-Write". <ul style="list-style-type: none"> - Read-Only: users can only view the configuration of gateway in this level. - Read-Write: users can view and set the configuration of gateway in this level. |

Table 3-4-2-2 User Management

3.4.3 SNMP

SNMP is widely used in network management for network monitoring. SNMP exposes management data with variables form in managed system. The system is organized in a management information base (MIB) which describes the system status and configuration. These variables can be remotely queried by managing applications.

Configuring SNMP in networking, NMS, and a management program of SNMP should be set up at the Manager.

Configuration steps are listed as below for achieving query from NMS:

1. Enable SNMP setting.
2. Download MIB file and load it into NMS.
3. Configure MIB View.
4. Configure VCAM.

3.4.3.1 SNMP

UG67 supports SNMPv1, SNMPv2c and SNMPv3 version. SNMPv1 and SNMPv2c employ community name authentication. SNMPv3 employs authentication encryption by username and password.

Figure 3-4-3-1

| SNMP Settings | |
|----------------------|--|
| Item | Description |
| Enable | Enable or disable SNMP function. |
| Port | Set SNMP listened port. Range: 1-65535. The default port is 161. |
| SNMP Version | Select SNMP version; support SNMP v1/v2c/v3. |
| Location Information | Fill in the location information. |
| Contact Information | Fill in the contact information. |

Table 3-4-3-1 SNMP Parameters

3.4.3.2 MIB View

This section explains how to configure MIB view for the objects.

Figure 3-4-3-2

| MIB View | |
|-------------|--|
| Item | Description |
| View Name | Set MIB view's name. |
| View Filter | Select from "Included" and "Excluded". |
| View OID | Enter the OID number. |
| Included | You can query all nodes within the specified MIB node. |
| Excluded | You can query all nodes except for the specified MIB node. |

Table 3-4-3-2 MIB View Parameters

3.4.3.3 VACM

This section describes how to configure VACM parameters.

Figure 3-4-3-3

| VACM | |
|-----------------------------------|---|
| Item | Description |
| SNMP v1 & v2 User List | |
| Community | Set the community name. |
| Permission | Select from "Read-Only" and "Read-Write". |
| MIB View | Select an MIB view to set permissions from the MIB view list. |
| Network | The IP address and bits of the external network accessing the MIB view. |

| | |
|--------------------------|--|
| Read-Write | The permission of the specified MIB node is read and write. |
| Read-Only | The permission of the specified MIB node is read only. |
| SNMP v3 User List | |
| Group Name | Set the name of SNMPv3 group. |
| Security Level | Select from "NoAuth/NoPriv", "Auth/NoPriv", and "Auth/Priv". |
| Read-Only View | Select an MIB view to set permission as "Read-only" from the MIB view list. |
| Read-Write View | Select an MIB view to set permission as "Read-write" from the MIB view list. |
| Inform View | Select an MIB view to set permission as "Inform" from the MIB view list. |

Table 3-4-3-3 VACM Parameters

3.4.3.4 Trap

This section explains how to enable network monitoring by SNMP trap.

Figure 3-4-3-4

| SNMP Trap | |
|----------------|---|
| Item | Description |
| Enable | Enable or disable SNMP Trap function. |
| SNMP Version | Select SNMP version; support SNMP v1/v2c/v3. |
| Server Address | Fill in NMS's IP address or domain name. |
| Port | Fill in UDP port. Port range is 1-65535. The default port is 162. |
| Name | Fill in the group name when using SNMP v1/v2c; fill in the username when using SNMP v3. |
| Auth/Priv Mode | Select from "NoAuth & No Priv", "Auth & NoPriv", and "Auth & Priv". |

Table 3-4-3-4 Trap Parameters

3.4.3.5 MIB

This section describes how to download MIB files.

Figure 3-4-3-5

| MIB | |
|----------|---|
| Item | Description |
| MIB File | Select the MIB file you need. |
| Download | Click "Download" button to download the MIB file to PC. |

Table 3-4-3-5 MIB Download

3.4.5 Device Management

You can connect the device to the DeviceHub on this page so as to manage the gateway centrally and remotely. For details refer to DeviceHub User Guide.

Figure 3-4-5-1

| DeviceHub | |
|---------------------------|--|
| Item | Description |
| Status | Show the connection status between the gateway and the DeviceHub. |
| Disconnected | Click this button to disconnect the gateway from the DeviceHub. |
| Activation Server Address | IP address or domain of the DeviceHub. |
| DeviceHub Server Address | The URL address for the device to connect to the DeviceHub, e.g. http://220.82.63.79:8080/acs. |
| Activation Method | Select activation method to connect the gateway to the |

| | |
|---------------------|---|
| | DeviceHub server, options are "By Authentication ID" and "By ID". |
| Authentication Code | Fill in the authentication code generated from the DeviceHub. |
| ID | Fill in the registered DeviceHub account (email) and password. |
| Password | |

Table 3-4-5-1

3.4.6 Events

Event feature is capable of sending alerts by Email when certain system events occur.

3.4.6.1 Events

You can view alarm messages on this page.

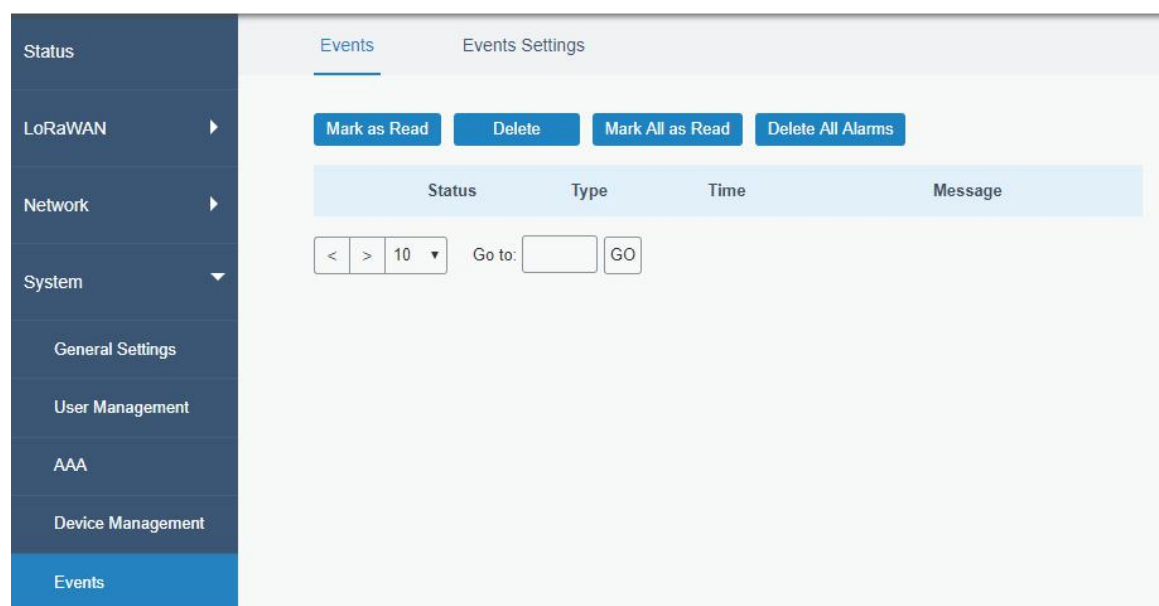

Figure 3-4-6-1

| Events | |
|-------------------|---|
| Item | Description |
| Mark as Read | Mark the selected event alarm as read. |
| Delete | Delete the selected event alarm. |
| Mark All as Read | Mark all event alarms as read. |
| Delete All Alarms | Delete all event alarms. |
| Status | Show the reading status of the event alarms, such as "Read" and "Unread". |
| Type | Show the event type that should be alarmed. |
| Time | Show the alarm time. |
| Message | Show the alarm content. |

Table 3-4-6-1 Events Parameters

3.4.6.2 Events Settings

In this section, you can decide what events to record and whether you want to receive email and SMS notifications when any change occurs.

| Events | Record | Email Email Setting | SMS SMS Setting |
|---------------|--------------------------|--------------------------|--------------------------|
| Cellular Up | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Cellular Down | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| WAN Up | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| WAN Down | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| VPN Up | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| VPN Down | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Power On | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Power Off | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Figure 3-4-6-2

| Event Settings | |
|----------------|---|
| Item | Description |
| Enable | Check to enable "Events Settings". |
| Cellular Up | Cellular network is connected. |
| Cellular Down | Cellular network is disconnected. |
| WAN Up | Ethernet cable is connected to WAN port. |
| WAN Down | Ethernet cable is disconnected to WAN port. |
| VPN Up | VPN is connected. |
| VPN Down | VPN is disconnected. |
| Power On | The gateway has powered on. |
| Power Off | The gateway has powered off. |
| Record | The relevant content of event alarm will be recorded on "Event" page if this option is checked. |
| Email | The relevant content of event alarm will be sent out via email if this option is checked. |
| Email Setting | Click and you will be redirected to the page "Email" to configure the Email group. |

| | |
|------------------|---|
| SMS | The relevant content of event alarm will be sent out via SMS if this option is checked. |
| SMS Setting | Click and you will be redirected to the page of "Phone" to configure phone group list. |
| Phone Group List | Select phone group to receive SMS alarm. |
| Email Group List | Select Email group to receive Email alarm. |

3.5 Maintenance

This section describes system maintenance tools and management.

3.5.1 Tools

Troubleshooting tools includes ping and traceroute.

3.5.1.1 Ping

Ping tool is engineered to ping outer network.

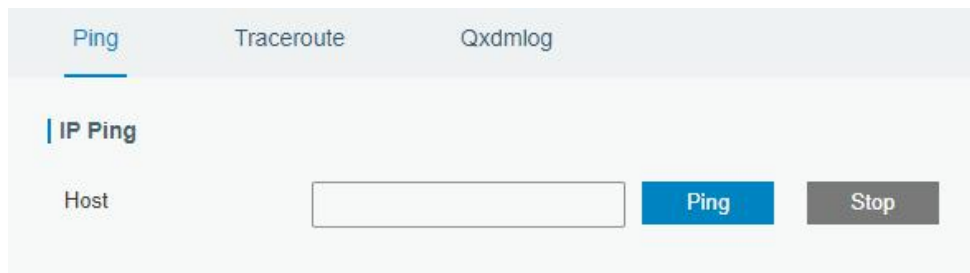

Figure 3-5-1-1

| PING | |
|------|--------------------------------------|
| Item | Description |
| Host | Ping outer network from the gateway. |

Table 3-5-1-1 IP Ping Parameters

3.5.1.2 Traceroute

Traceroute tool is used for troubleshooting network routing failures.

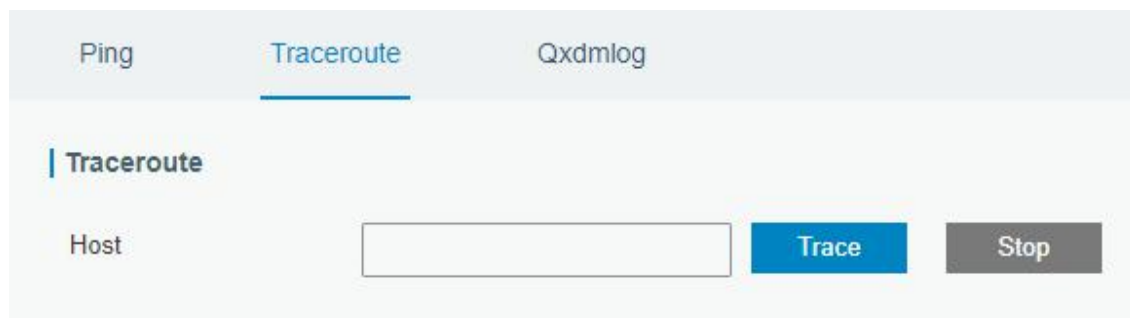

Figure 3-5-1-2

| Traceroute | |
|------------|---|
| Item | Description |
| Host | Address of the destination host to be detected. |

Table 3-5-1-2 Traceroute Parameters

3.5.2 Schedule

This section explains how to configure scheduled reboot on the gateway.

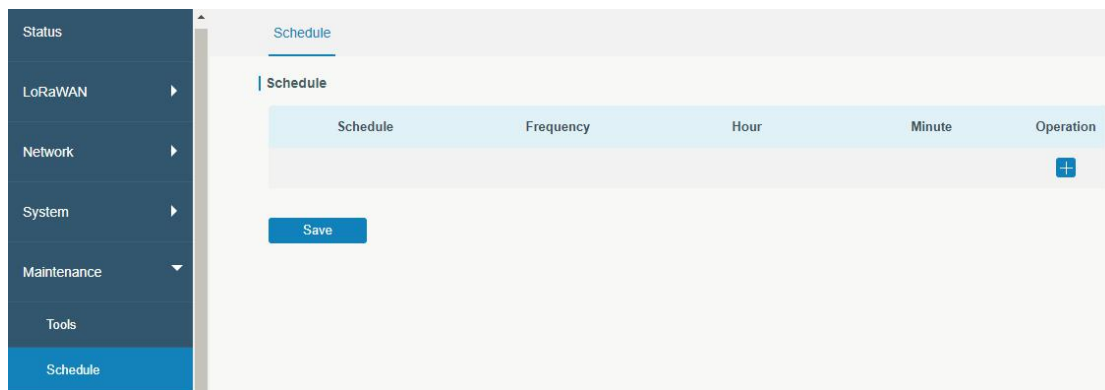

Figure 3-5-2-1

| Schedule | |
|---------------|---|
| Item | Description |
| Schedule | Select schedule type. |
| Reboot | Reboot the gateway regularly. |
| Frequency | Select the frequency to execute the schedule. |
| Hour & Minute | Select the time to execute the schedule. |

Table 3-5-2-1 Schedule Parameters

3.5.3 Log

The system log contains a record of informational, error and warning events that indicates how the system processes. By reviewing the data contained in the log, an administrator or user troubleshooting the system can identify the cause of a problem or whether the system processes are loading successfully. Remote log server is feasible, and gateway will upload all system logs to remote log server such as Syslog Watcher.

3.5.3.1 System Log

This section describes how to download log file and view the recent log on web.

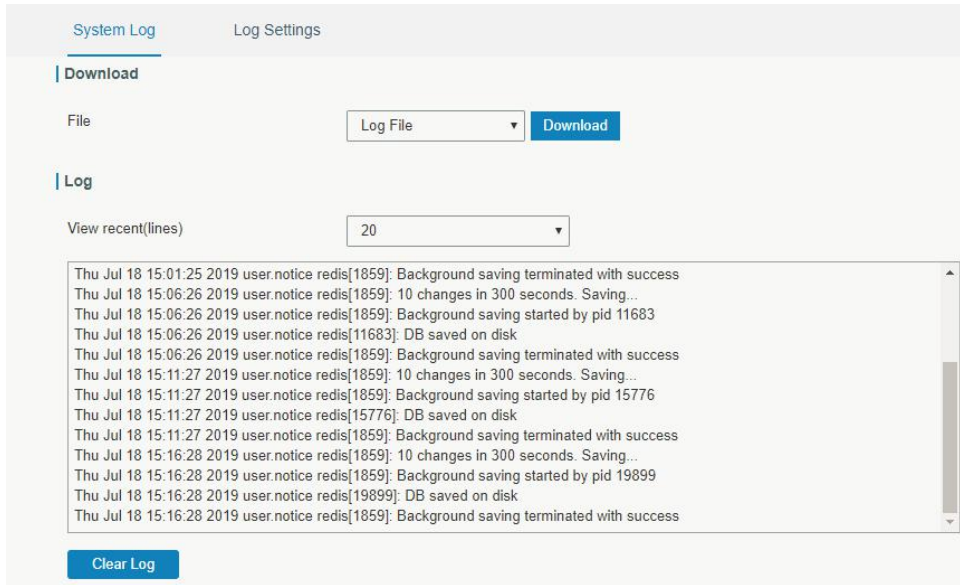

Figure 3-5-3-1

| System Log | |
|---------------------|---|
| Item | Description |
| Download | Download log file. |
| View recent (lines) | View the specified lines of system log. |
| Clear Log | Clear the current system log. |

Table 3-5-3-1 System Log Parameters

3.5.3.2 Log Settings

This section explains how to enable remote log server and local log setting.

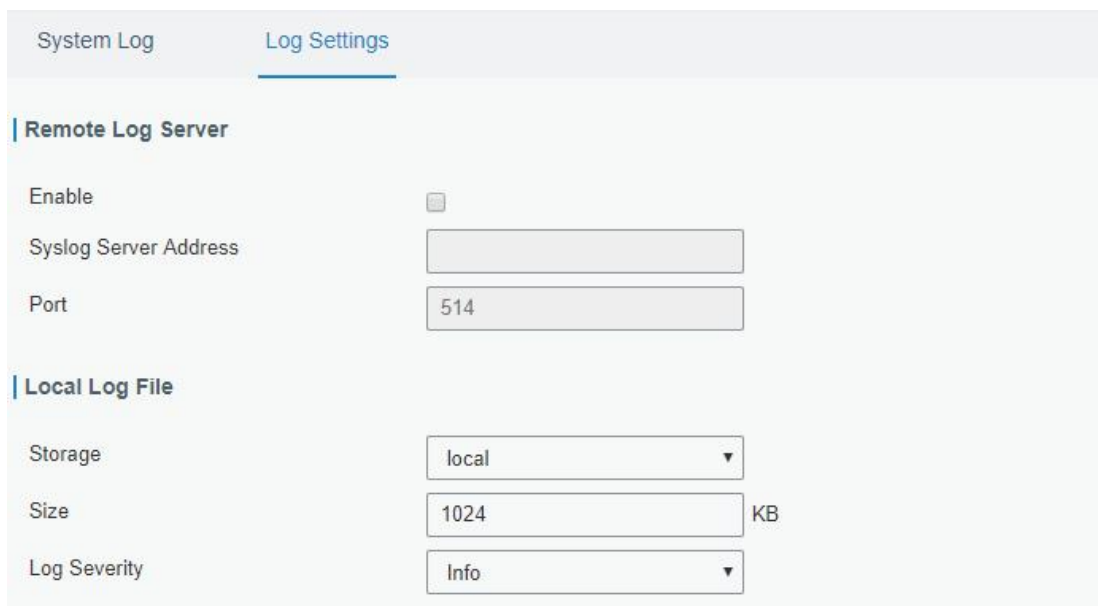

Figure 3-5-3-2

| Log Settings | |
|--------------------------|---|
| Item | Description |
| Remote Log Server | |
| Enable | With "Remote Log Server" enabled, gateway will send all system logs to the remote server. |
| Syslog Server Address | Fill in the remote system log server address (IP/domain name). |
| Port | Fill in the remote system log server port. |
| Local Log File | |
| Storage | User can store the log file in memory or TF card. |
| Size | Set the size of the log file to be stored. |
| Log Severity | The list of severities follows the syslog protocol. |

Table 3-5-3-2 System Log Parameters

3.5.4 Upgrade

This section describes how to upgrade the gateway firmware via web. Generally you don't need to do the firmware upgrade.

Note: any operation on web page is not allowed during firmware upgrade, otherwise the upgrade will be interrupted, or even the device will break down.

The screenshot shows the 'Upgrade' section of a web interface. At the top, the word 'Upgrade' is underlined. Below it, the section is titled '| Upgrade'. The 'Firmware Version' is displayed as '60.0.0.33'. There is a checkbox for 'Reset Configuration to Factory Default' which is currently unchecked. Below this is a text input field for 'Upgrade Firmware', followed by a blue 'Browse' button and a grey 'Upgrade' button.

Figure 3-5-4-1

| Upgrade | |
|--|---|
| Item | Description |
| Firmware Version | Show the current firmware version. |
| Reset Configuration to Factory Default | When this option is checked, the gateway will be reset to factory defaults after upgrade. |
| Upgrade Firmware | Click "Browse" button to select the new firmware file, and click "Upgrade" to upgrade firmware. |

3.6 APP

3.6.1 Python

Python is an object-oriented programming language that has gained popularity because of its clear syntax and readability.

As an interpreted language, Python has a design philosophy that emphasizes code readability, notably using whitespace indentation to delimit code blocks rather than curly brackets or keywords, and a syntax that allows programmers to express concepts in fewer lines of code than it's used in other languages such as C++ or Java. The language provides constructs and intends to enable writing clear programs on both small and large scale.

Users can use Python to quickly generate the prototype of the program, which can be the final interface of the program, rewrite it with a more appropriate language, and then encapsulate the extended class library that Python can call.

This section describes how to view the relevant running status such as App-manager, SDK version, extended storage, etc. Also you can change the App-manager configuration, and import the Python App package from here.

3.6.1.1 Python

3.6.2 Node-RED

Node-RED is a flow-based development tool for visual programming and wiring together hardware devices, APIs and online services as part of the Internet of Things. Node-RED provides a web-browser-based flow editor, which can easily wire together flows using the wide range of nodes in the palette. Besides basic nodes, Milesight gateways provide following customized nodes:

- LoRa Input: receive the LoRa data, please ensure the network server mode is enabled before using this node
- LoRa Output: send downlinks to LoRaWAN® nodes
- Device Filter: filter out the data of one or more specific LoRaWAN® nodes
- Decoder: decode the Milesight LoRaWAN® end nodes data
- GW Info: monitor alarm messages of gateway, please ensure the event detection is enabled in “General -> Events -> Events Settings”
- Email Output: send LoRa data or gateway alarms via email
- SMS Input: receive SMS message. This only works when cellular is connected
- SMS Output: send SMS message. This only works when cellular is connected

Chapter 4 Application Examples

4.1 Restore Factory Defaults

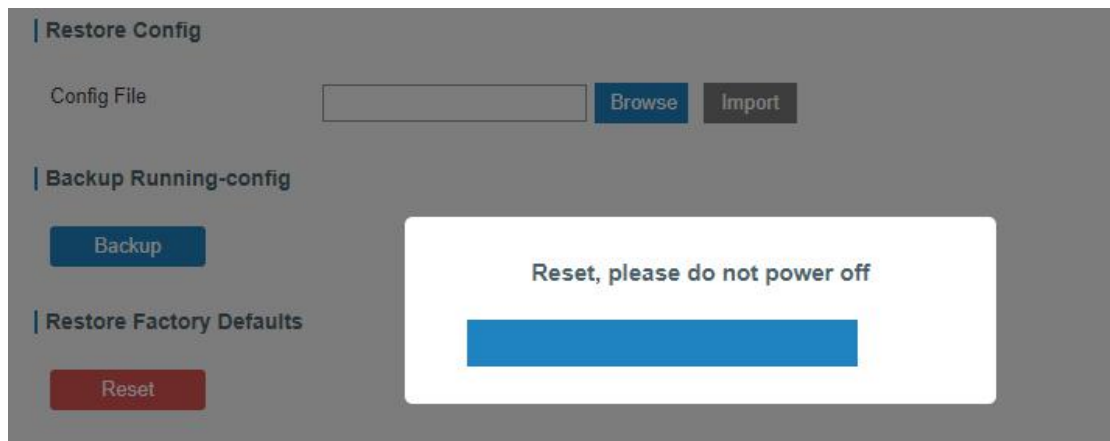

4.1.1 Via Web Interface

1. Log in web interface, and go to “Maintenance > Backup and Restore”.
2. Click “Reset” button under the “Restore Factory Defaults”.

You will be asked to confirm if you’d like to reset it to factory defaults. Then click “Reset” button.

Then the gateway will reboot and restore to factory settings immediately.

Please wait till SYS light staticly and the login page pops up again, which means the gateway has already been reset to factory defaults successfully.

Related Topic

[Restore Factory Defaults](#)

4.1.2 Via Hardware

Locate the reset button on the gateway, and take corresponding actions based on the status of SYS LED.

| SYS LED | Action |
|---------------------------------|--|
| Static Green | Press and hold the reset button for more than 5 seconds. |
| Static Green → Rapidly Blinking | Release the button and wait. |
| Off → Static Green | The gateway is now reset to factory defaults. |

4.2 Firmware Upgrade

It is suggested that you contact Milesight technical support first before you upgrade gateway firmware. Gateway firmware file suffix is ".bin".

After getting firmware file please refer to the following steps to complete the upgrade.

1. Go to "Maintenance > Upgrade".
2. Click "Browse" and select the correct firmware file from the PC.
3. Click "Upgrade" and the gateway will check if the firmware file is correct. If it's correct, the firmware will be imported to the gateway, and then the gateway will start to upgrade.

4.5 Wi-Fi Application Example

4.5.1 AP Mode

Application Example

Configure UG67 as AP to allow connection from users or devices.

Configuration Steps

1. Go to "Network > Interface > WLAN" to configure wireless parameters as below.

| Port | WLAN | Cellular | Loopback |
|-------------------|-------------------------------------|----------|----------|
| WLAN | | | |
| Enable | <input checked="" type="checkbox"/> | | |
| Work Mode | AP | | |
| SSID Broadcast | <input checked="" type="checkbox"/> | | |
| AP Isolation | <input type="checkbox"/> | | |
| Radio Type | 802.11n(2.4GHz) | | |
| Channel | Auto | | |
| SSID | Gateway_F1200F | | |
| BSSID | 24:e1:24:f1:20:0f | | |
| Encryption Mode | No Encryption | | |
| Bandwidth | 20MHz | | |
| Max Client Number | 10 | | |

Click “Save” and “Apply” buttons after all configurations are done.

2. Use a smart phone to connect the access point of gateway. Go to “Status > WLAN”, and you can check the AP settings and information of the connected client/user.

| Overview | Packet Forward | Cellular | Network | WLAN | VPN |
|---------------------|-------------------|----------|---------|------|-----|
| WLAN Status | | | | | |
| Wireless Status | Enabled | | | | |
| MAC Address | 24:e1:24:f1:20:0f | | | | |
| Interface Type | AP | | | | |
| SSID | Gateway_F1200F | | | | |
| Channel | Auto | | | | |
| Encryption Type | No Encryption | | | | |
| Status | Up | | | | |
| IP Address | 192.168.1.1 | | | | |
| Netmask | 255.255.255.0 | | | | |
| Connection Duration | 0 days, 02:40:52 | | | | |

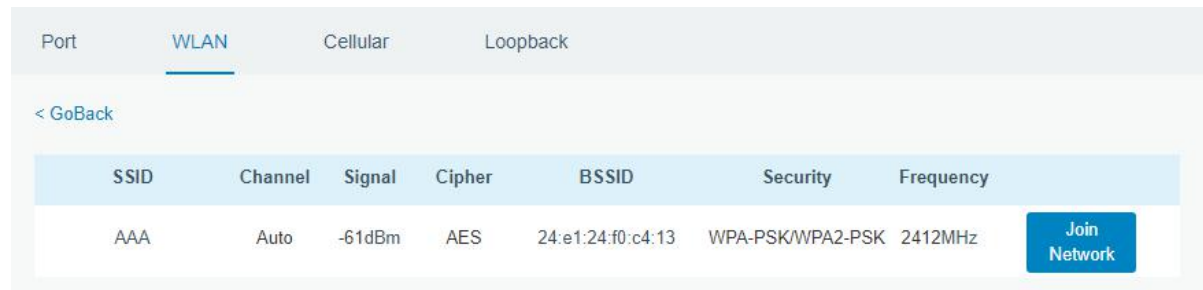

4.5.2 Client Mode

Application Example

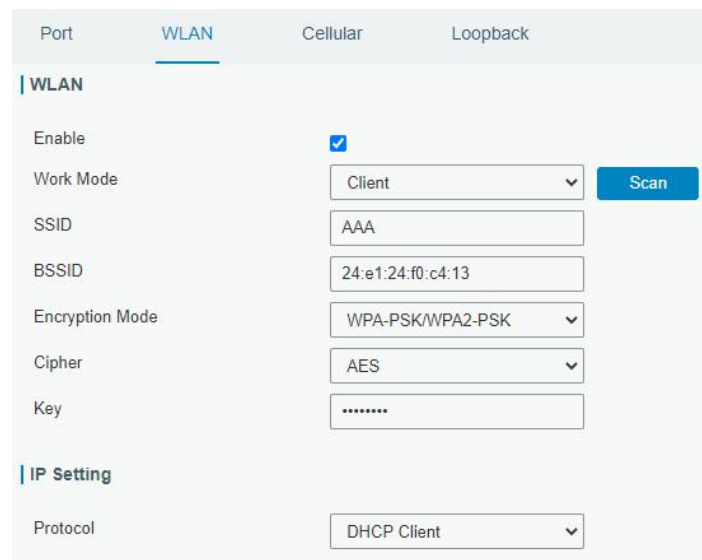

Configure UG67 as Wi-Fi client to connect to an access point to have Internet access.

Configuration Steps

1. Go to “Network > Interface > WLAN” and click “Scan” to search for WiFi access point.

2. Select one access point and click “Join Network”, then type the password of the access point.

Click “Save” and “Apply” buttons after all configurations are done.

3. Go to “Status > WLAN”, and you can check the connection status of the client.

| Overview | Packet Forward | Cellular | Network | WLAN |
|---------------------|-------------------|----------|---------|------|
| WLAN Status | | | | |
| Wireless Status | Enabled | | | |
| MAC Address | 24:e1:24:f0:de:14 | | | |
| Interface Type | Client | | | |
| SSID | AAA | | | |
| Channel | Auto | | | |
| Encryption Type | WPA-PSK/WPA2-PSK | | | |
| Cipher | AES | | | |
| Status | Connected | | | |
| IP Address | 192.168.1.145 | | | |
| Netmask | 255.255.255.0 | | | |
| Connection Duration | 0 days, 02:44:45 | | | |

4.6 Packet Forwarder Configuration

UG67 gateway has installed multiple packet forwarders including Semtech, Basic station, Chirpstack-Generic MQTT broker, etc. Before connecting make sure the gateway has connected to network.

1. Go to "Packet Forwarder" > "General".

| General | Radios | Advanced | Custom | Traffic |
|--------------------------|---|-------------|----------------|-----------|
| General Setting | | | | |
| Gateway EUI | 24E124FFFEF0E225 | | | |
| Gateway ID | <input type="text" value="24E124FFFEF0E225"/> | | | |
| Frequency-Sync | <input type="text" value="Disabled"/> | | | |
| Multi-Destination | | | | |
| Connect Status | Connected | | | |
| ID | Enable | Type | Server Address | Operation |
| 0 | Enabled | Embedded NS | localhost | |
| | | | | |

- Click  to add a new network server. Fill in the network server information and enable this server.

Enable

Type Semtech

Server Address eu1.cloud.thethings.network

Port Up 1700

Port Down 1700

Save

- Go to "Packet Forwarder -> Radio" page to configure antenna type, center frequency and channels. The channels of the gateway and network server need to be the same.

Region US915

| Name | Center Frequency/MHz |
|---------|--|
| Radio 0 | 904.3 |
| Radio 1 | 905.0 |

Multi Channels Setting

| Enable | Index | Radio | Frequency/MHz |
|-------------------------------------|-------|--|--|
| <input checked="" type="checkbox"/> | 0 | Radio 0 | 903.9 |
| <input checked="" type="checkbox"/> | 1 | Radio 0 | 904.1 |
| <input checked="" type="checkbox"/> | 2 | Radio 0 | 904.3 |
| <input checked="" type="checkbox"/> | 3 | Radio 0 | 904.5 |
| <input checked="" type="checkbox"/> | 4 | Radio 1 | 904.7 |
| <input checked="" type="checkbox"/> | 5 | Radio 1 | 904.9 |
| <input checked="" type="checkbox"/> | 6 | Radio 1 | 905.1 |
| <input checked="" type="checkbox"/> | 7 | Radio 1 | 905.3 |

- Add the gateway on network server page. For more details about the network server connection please refer to [Milesight IoT Support portal](#).
- Go to "Traffic" page to view the data communication of UG67.

4.7 Connect UG67 to Milesight IoT Cloud

1. Go to “Packet Forwarder->General” page to enable the embedded network server.

The screenshot shows the 'General Setting' page for a Packet Forwarder. The 'Connect Status' is 'Connected'. Below this, there is a table with the following data:

| ID | Enable | Type | Server Address | Operation |
|----|---------|-------------|----------------|-----------|
| 0 | Enabled | Embedded NS | localhost | |

2. Go to “Packet Forwarder-> Radio” page to select the antenna type, center frequency and channels. The channels of the gateway and nodes need to be the same.

The screenshot shows the 'Radio' configuration page. The 'Region' is set to 'US915'. Two radio channels are defined:

| Name | Center Frequency/MHz |
|---------|----------------------|
| Radio 0 | 904.3 |
| Radio 1 | 905.0 |

Below this, the 'Multi Channels Setting' table shows 8 channels, each enabled and mapped to either Radio 0 or Radio 1:

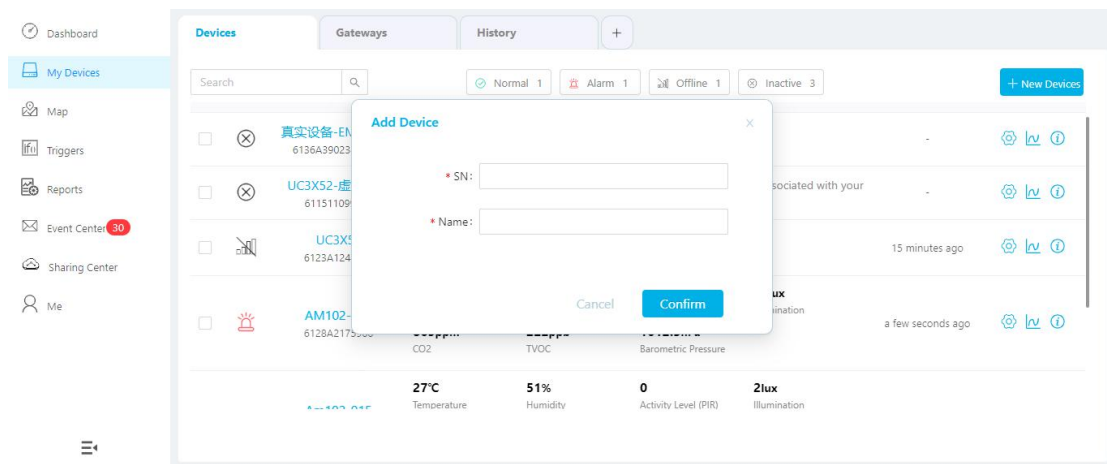

| Enable | Index | Radio | Frequency/MHz |
|-------------------------------------|-------|---------|---------------|
| <input checked="" type="checkbox"/> | 0 | Radio 0 | 903.9 |
| <input checked="" type="checkbox"/> | 1 | Radio 0 | 904.1 |
| <input checked="" type="checkbox"/> | 2 | Radio 0 | 904.3 |
| <input checked="" type="checkbox"/> | 3 | Radio 0 | 904.5 |
| <input checked="" type="checkbox"/> | 4 | Radio 1 | 904.7 |
| <input checked="" type="checkbox"/> | 5 | Radio 1 | 904.9 |
| <input checked="" type="checkbox"/> | 6 | Radio 1 | 905.1 |
| <input checked="" type="checkbox"/> | 7 | Radio 1 | 905.3 |

3. Go to “Network Server” → “General” page to enable the network server and “Milesight IoT Cloud” mode.

The screenshot shows the 'General Setting' page for the Network Server. The 'Enable' and 'Milesight IoT Cloud' checkboxes are checked. Other settings include:

| | |
|------------|-------------------|
| NetID | 010203 |
| Join Delay | 5 sec |
| RX1 Delay | 1 sec |
| Lease Time | 8760-0-0 hh-mm-ss |
| Log Level | info |

- Log in the Milesight IoT Cloud. Then go to “My Devices” page and click “+New Devices” to add gateway to Milesight IoT Cloud via SN. Gateway will be added under “Gateways” menu.

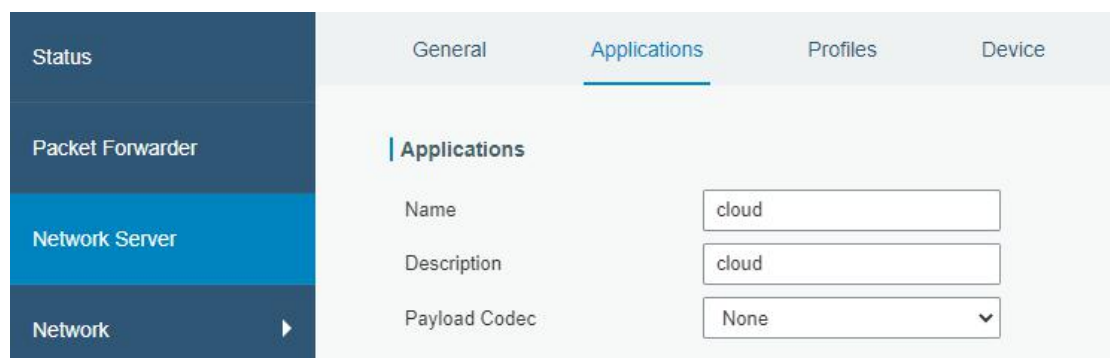

- The gateway is online on Milesight IoT Cloud.

4.8 Application Configuration

You can create a new application on this page, which is mainly used to define the method of decoding the data sent from end-device and choosing the data transport protocol to send data to another server address. The data will be sent to your custom server address using MQTT, HTTP or HTTPS protocol.

- Go to “Network Server” > “Application”.
- Click  to enter the configuration page, displayed as the following picture:

- Click “Save” to create this application.
- Click  to add a data transmission type.

HTTP or HTTPS:

Step 1: select HTTP or HTTPS as transmission protocol.

A screenshot of a configuration interface showing a dropdown menu labeled 'Type' with 'HTTP' selected.

Step 2: Enter the destination URL. Different types of data can be sent to different URLs.

A screenshot of a configuration interface showing a table for entering destination URLs for different data types.

| Data Type | URL |
|--------------------|----------------------|
| Uplink data | <input type="text"/> |
| Join notification | <input type="text"/> |
| ACK notification | <input type="text"/> |
| Error notification | <input type="text"/> |

Enter the header name and header value if there is user credentials when accessing the HTTP(s) server.

A screenshot of a configuration interface showing a table for entering HTTP headers.

| Header Name | Header Value | Operation |
|----------------------------------|----------------------|----------------------------------|
| <input type="text"/> | <input type="text"/> | <input type="button" value="X"/> |
| <input type="button" value="+"/> | | |

MQTT:

Step 1: select the transmission protocol as MQTT.

A screenshot of a configuration interface showing a dropdown menu labeled 'Type' with 'MQTT' selected.

Step 2: Fill in MQTT broker general settings.

A screenshot of a configuration interface showing the 'General' settings for MQTT broker.

| | |
|-----------------------|---------------------------------|
| Broker Address | <input type="text"/> |
| Broker Port | <input type="text"/> |
| Client ID | <input type="text"/> |
| Connection Timeout/s | <input type="text" value="30"/> |
| Keep Alive Interval/s | <input type="text" value="60"/> |

Step 3: Select the authentication method required by the server.

If you select user credentials for authentication, you need to enter the username and password for authentication.

User Credentials

Enable

Username

Password

If certificate is necessary for verification, please select mode and import CA certificate, client certificate and client key file for authentication.

TLS

Enable

Mode

CA File Browse Import Delete

Client Certificate File Browse Import Delete

Client Key File Browse Import Delete

Step 4: Enter the topic to receive data and choose the QoS.

| Data Type | topic | |
|-------------------------|-----------------------------|-------|
| Uplink data | devices/UR67/messages/event | QoS 0 |
| Downlink data | <input type="text"/> | QoS 0 |
| Multicast downlink data | <input type="text"/> | QoS 0 |
| Join notification | <input type="text"/> | QoS 0 |
| ACK notification | <input type="text"/> | QoS 0 |
| Error notification | <input type="text"/> | QoS 0 |

4.9 Device Configuration

Go to "Device" page and click "Add" to add LoRaWAN® node devices. Please select correct device profile according to device type.

General Applications Profiles Device Gateways Packets

Import this file to add bulks of devices.

4.10 Send Data to Device

1. Go to “Network Server” > “Packets”, check the packet in the network server list to make sure that the device has joined the network successful.

| | | | | | | | | | |
|------------|-----------|----------|-----|-----|----|---|-------|---------------------------|--|
| 1122612191 | 868100000 | SF7BW125 | - | - | 17 | 0 | JnAcc | 2019-08-06T09:22:29+08:00 | |
| 112261219 | 868100000 | SF7BW125 | 9.5 | -77 | 18 | 0 | JnReq | 2019-08-06T09:22:29+08:00 | |

2. Fill in the device EUI or select the multicast group which you need to send downlinks. Then fill in the downlink commands, ports.

Send Data To Device

| Device EUI | Type | Payload | Fport | Confirmed |
|-------------|-------|---------|-------|-------------------------------------|
| 11226121913 | ASCII | 15 | 15 | <input checked="" type="checkbox"/> |

3. Click "Send".

4. Check the packet in the network server list to make sure that the device has received this message successful. It's suggested to enable "Confirmed". Multicast feature does not support confirmed downlinks.

Send Data To Device

| Device EUI | Type | Payload | Fport | Confirmed |
|-------------|-------|---------|-------|-------------------------------------|
| 11226121913 | ASCII | 15 | 15 | <input checked="" type="checkbox"/> |

You can click "Refresh" to refresh the list or set automatic refreshing frequency for the list. **If the device's class type is Class C, then the device will constantly receive packets.**

This packet's type is DnCnf (Downlink Confirmed Packet) and if the packet's color is gray, then it means the packet cannot be transmitted now because at least one message has been in the queue. If the packet record is white, it means the packet has been delivered successfully.

| | | | | | | | | | | |
|------------------|-----------|-----------|---|---|---|---|-------|---------------------------|---------|---|
| 1122612191311123 | 869525000 | SF12BW125 | - | - | 6 | 2 | DnCnf | 2019-08-06T09:22:55+08:00 | Success | ! |
| 1122612191311123 | 0 | | | | 6 | 2 | DnCnf | | Pending | ! |

If the device receives this downlink confirmed packet, then the device will reply "ACK" when delivering next.

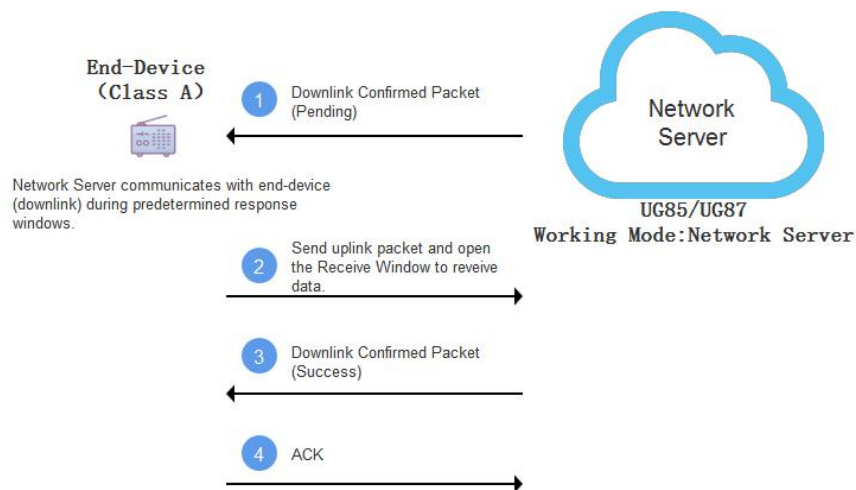

| Device EUI | Frequency | Datarate | SNR | RSSI | Size | Fcnt | Type | Time | Details |

| DevEUI | 1122612191311123 |
| Immediately | - |
| Timestamp | 874346044 |
| Type | UpCnf |
| Adr | false |
| AdrAckReq | false |
| Ack | true |
| Fcnt | 21 |
| Fport | 55 |
| Modulation | LORA |

Ack is "true" means that the device has received this packet.

If the device's class type is Class A, only after the device sends out an uplink packet will the network server sends out data to the device.

4.11 Node-RED

4.11.1 Start the Node-RED

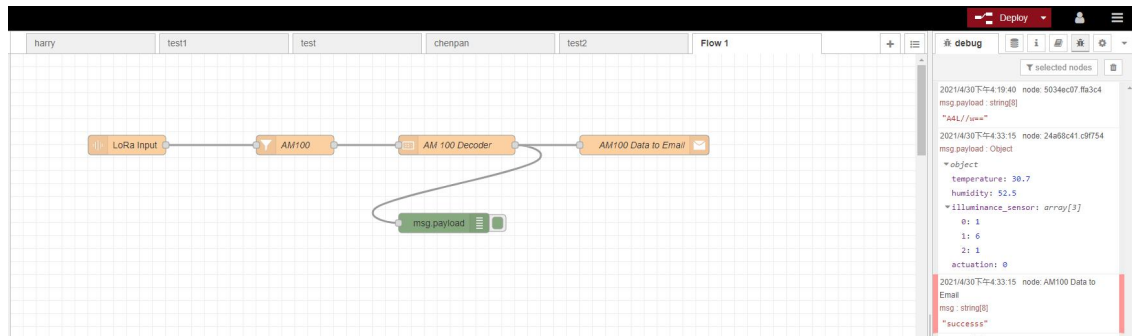

1. Go to "App > Node-RED" to enable the Node-RED feature.
2. After enabled, click "Launch" to go to the Node-RED web GUI and to log in with the same username and password as gateway.

4.11.2 Send Data by Email

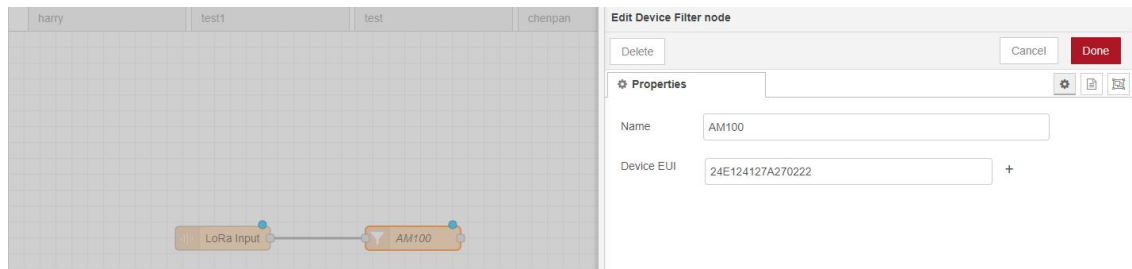

Application Example

Send AM104 device data by Email.

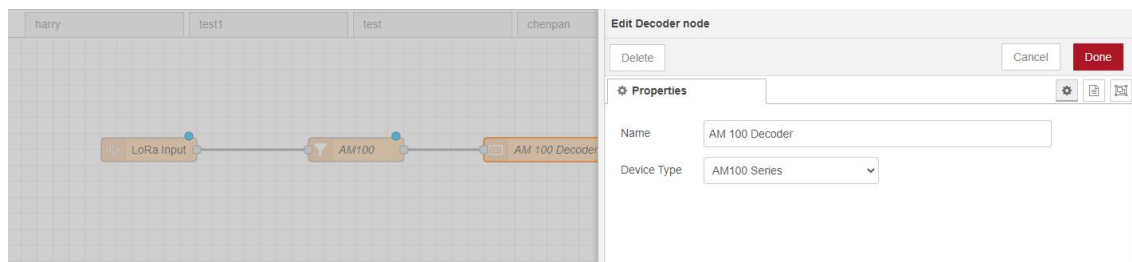

Configuration Steps

1. Add a "LoRa Input" node. Before adding please ensure network server mode is enabled and LoRaWAN devices have joined the network.
2. If you add many devices and only need one device data, add "Device Filter" node behind the "LoRa Input" and type the device EUI.

3. Add a "Decoder" node to decode the Milesight sensor data.

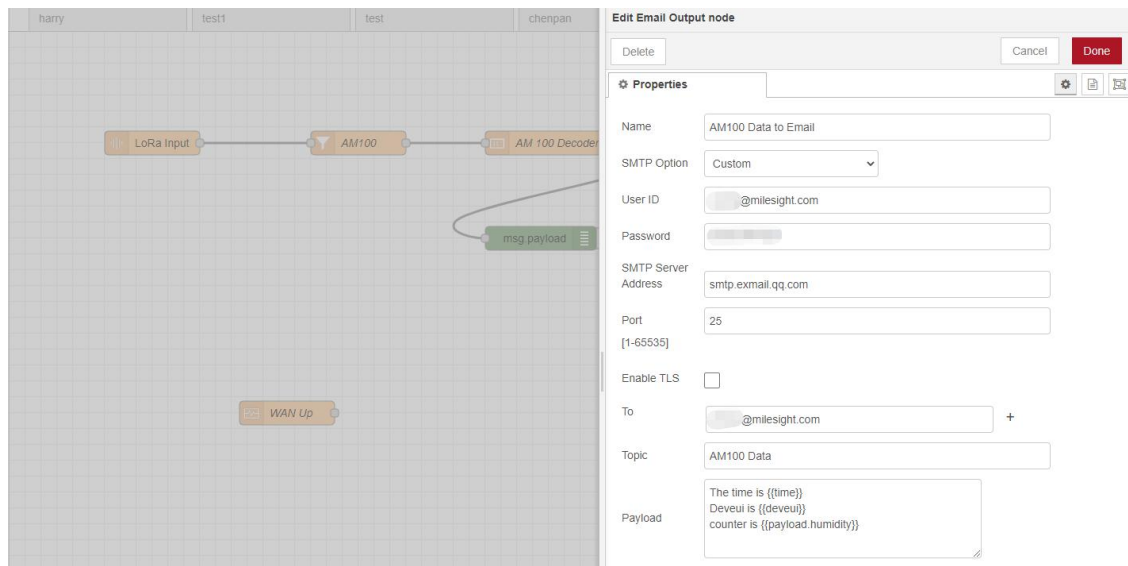

4. Add an "Email Output" and type the SMTP client settings, destination email address and contents. Example content:

The time is {{time}}

Deveui is {{deveui}}

Humidity is {{payload.humidity}}

Note:

- 1) When you select SMTP Option as "Same as Gateway", go to "System -> General Settings -> SMTP" to configure the SMTP clients.
- 2) Basic format to call LoRaWAN node data is `{{(property name)}}`, you can click "Help" page for more info about the Email or SMS payload format.
- 3) If you need to check the output content in every node, please add debug node.
5. After completing the configuration, click "Deploy" to save all your configuration.

6. When AM104 sends data to gateway, gateway will transfer the data to email.
